SPECIAL ADVENTURE ISSUE

- WAY OUT HINTS & TIPS

Strike Force Harrier is the title of a highly realistic simulation from Mirrorsoft.

The program, launched first on the BBC, is a sophisticated replication of the flight characteristics of the vertical take-off plane.

Price for the game is £9.95.

Beyond answers Telecom's call

BRITISH TELECOM has increased its involvement with entertainment software by buying Beyond Software, previously a division of the publishing group EMAP for,

apparently, a six figure sum.

Beyond, which produced chart topping titles including *Lords of Midnight*, *Shadowfire*, and *Spy vs Spy*, will now become a division of

New Information Services, BT's electronic publishing arm. EMAP will not retain any share of Beyond.

BT will not, however, be merging Beyond with its own software company Firebird. The two will be run entirely separately.

"Beyond will be a sister company to Firebird. The two will maintain their own names, and although there

will be some common management functions, we won't be changing the Beyond image," said Dr Ederyn Williams, general manager of New Information Services.

The deal will not affect Beyond's proposed range of titles this autumn. Its agreement with US Company First Star for *Superman* and other titles has been transferred to

continued on page 5 ▶

DOMARK is set to publish a game based on the successful Friday the Thirteenth horror movie series next month.

The programming is being carried out by ASK, a team previously acclaimed for its educational programs.

"It'll be something of a computer nasty, but we're not going to overstep the mark," said Domark's Dominic Wheatley. The object is to stay alive, and save as many other characters as possible.

At £8.95, Friday the Thirteenth will be available for the Spectrum, Commodore 64 and Amstrad machines.

EDITORIAL

About now the adverts, special offers, bundling deals and other marketing devices will begin. Now is the time that people start to think about Christmas presents and when the bulk of micro computer sales occur. Now is the time the potential micro purchaser must be persuaded to buy one machine rather than another.

Just after Christmas we and other magazines will get quite a lot of phone calls from people who have bought (or been bought) a micro that, they have discovered, has little software support in general and more specifically has no software to rival that which they see on other people's machines.

Several major chain stores, the kind of places where most of the Christmas selling takes place, are already stocking machines which they know lack and will lack almost any software support whatsoever in the new year.

True enough, the machines in question are cheap, and obviously that attracts people to them, but a cheap machine with no software is, for most people, merely a waste of money.

It may be that some people imagine that because all they really want from their machine is to learn to program, it really doesn't matter how much software it has - the purists who are interested in 'educating' themselves and their children rather than playing games. Those people are almost always mistaken, however, even those who learn and become adept at Basic soon find plenty of reasons to buy commercial software.

If you're likely to be buying a computer this Christmas, don't just listen to the salesman, take along a copy of the top twenty chart from this magazine - are any of the titles there available on the machine you are thinking of buying? If they aren't you should wonder why.

'The Enterprise has the most flexible graphics system I have ever seen, by far the best on any home computer' - Jon Ritman

Commodore announces £90m loss for 1985

COMMODORE International has now announced a net loss of \$114m (around £90m) for the fiscal year ending June 30th 1985. This compares with a \$144m (£110m) profit in 1984. In the fourth quarter of 1985 alone, Commodore lost \$124m (£96m) compared with a \$33m (£26m) profit for the corresponding period in 1984.

Irving Gould, chairman of Commodore International, said, "Earnings during the fourth quarter were negatively impacted by promotional deals and lower sales."

He added that Commodore

expects an upturn in fortunes before Christmas.

"Commodore has recently begun shipping the 128 and Amiga computers, and we will realise the benefit from full retail distribution. We anticipate a profit for the quarter to December 1985."

As Commodore does not apparently split its financial results between the UK and US, it is difficult to estimate the contribution made by the UK division.

"Since the time covered by the figures, Commodore UK has brought in measures to improve the UK performance," said a spokesman for Commodore in this country. "Also there are products like the Commodore PC, and the bundled packages which are on sale in Europe only, and doing quite well."

Acorn gains £1m from Canada but loses £22m

GOOD news for Acorn at last comes in the shape of an order for over £1,000,000 - worth of BBC micros in Canada, but at the same time the company has recorded a loss of over £20m for the year ending June 30, 1985.

Ontario's Ministry of Citizenship and Culture has bought 1,000 BBC systems, including disc drives, monitors and printers, to use in the province's community centres.

Acorn has been pushing to get into the Canadian market

for over a year and the American version of BBC has been up against stiff competition with nine other micros.

Following the purchase BBC machines are now being tested in schools and universities throughout Canada.

One of the things that apparently swung things Acorn's way was software. "In particular we benefited because we could offer a huge range of software, having fitted the micros with UK operating systems," said Joe Black, sales director of Acorn's Education, training and consumer division.

"Altogether we listed 500 titles which we specifically recommended written by Acorn, the BBC and other software houses."

Despite two financial rescues earlier this year, Acorn has announced a loss of £22.2m for the year to June 30. Olivetti, which now owns 79.8% of Acorn, apparently estimated losses of £20m when it increased its stake in the company.

These figures compare with a profit of £10.8m in 1984, on a turnover of £93.2m.

This year's turnover was down 16% to £77.9m.

Sinclair's portable to feature 68000?

SINCLAIR Research's portable computer, code-named Pandora, will definitely be appearing next year, the company says, but Sinclair is keeping its plans flexible about the configuration of the machine.

The machine which eventually appears under the Pandora label now seems likely to be based on QL rather than Spectrum technology as originally planned.

The Pandora is now apparently scheduled for an April release with a price of around £300.

"Our portable computer development programme is

"We are firmly committed to 68000 series technology," she continued.

The apparently greatly increased sales of the QL since its price cut to £199 could well be acting as encouragement for a 68000-based Pandora.

Originally Sir Clive hoped that the portable would be launched in January or February next year.

"I don't know exactly when we'll introduce it," said a Sinclair spokesman. "Sir Clive didn't envisage last summer turning out the way it did. It'll still be 1986, but not the beginning."

The £50m plan to build a wafer-scale integration plant is also still going ahead, despite Robb Wilmot's departure from the Sinclair board. Wilmot had been masterminding the plan to raise the £50m.

"Robb Wilmot assisted in the development of a business plan for the wafer-scale integration plant but this was put on the back burner because of Sinclair's preoccupation with other things during the summer, and also because fund-raising is based on confidence," the spokesman continued.

Sinclair's Alison Maguire

going ahead," said Alison Maguire, Sinclair's new marketing manager. "However, our conception of how the machine fits in with the rest of our range can change."

ten with the new Gilsoft utility *Patch* which enables graphics and text to be portrayed simultaneously. It will be released first for the Spectrum in November at £7.95.

Silversoft will also be releasing the Amstrad version of *Bored of the Rings* next month.

Sherlock in new Delta 4 game

ROBIN OF Sherlock is the latest title from parodists Delta 4 Software, now being published by Silversoft.

Robin of Sherlock is written by Fergus McNeill, who was largely responsible for *Bored of the Rings*. Robin sets the player as a Sherlock Holmes-style character in a Sherwood-style forest, and involves much puzzle solving. The yellow brick road and Dorothy from *The Wizard of Oz*, pseudo nuns, smurfs masquerading as gnomes, cordless telephones, the Flying Squad and Professor Moriarty also put in appearances.

Robin of Sherlock was writ-

Swords and Sorcery due out at last

SWORDS AND SORCERY, PSS's long-awaited Dungeons and Dragons style, micro game may yet appear this Christmas.

The game has now been delayed for over a year, but it now looks as though it could finally be released in November.

"It was delayed largely because the initial idea for the game was too ambitious," said a spokesman for PSS.

A Spectrum version is scheduled first, followed by Commodore and then Amstrad. All will cost £9.95.

Beyond answers Telecom's call

◀ continued from page 1

British Telecom. Beyond's Monolith label has also been transferred, although some negotiations are continuing over Nexus.

"Nexus is a company in its own right, which licenses its titles to Beyond," said Bill Delaney, Beyond's managing director. "Therefore it must be entirely satisfied by the terms of the takeover."

"Here at Beyond it will be business as usual - it's simply

that the bank has changed. We're probably with a bigger bank now," he continued.

All Beyond's staff will remain with the company, but it won't move premises until the New Year. As part of New Information Services, Beyond will be under the same umbrella as MUD (which BT finances) and Program Express, as well as Firebird.

British Telecom, which was recently privatised, is diversifying into electronic publishing largely because of saturation in the home and business telephone market. "We cannot continue to just enjoy growth in the telecommunications market, especially as we no longer have a monopoly," Ederyn Williams explained. "Ventures such as Prestel and Yellow Pages have led to a necessary diversification into electronic publishing, which includes microcomputing."

One of the major aspects of Beyond which attracted BT was the contract with First Star in the States. "We were keen on the First Star link," Ederyn Williams said. "We

◀ Beyond's MD Bill Delaney

Mastertronic goes MAD with new games series

MASTERTRONIC is to introduce a new range of games, departing from its usual policy of releasing games at £1.99 only.

The Mad range of titles will cost £2.99 each, and three programs comprise the initial release in the series.

Spellbound, *Hero of the Golden Talisman* and *The Last V8* are all arcade strategy games. Mad is an acronym standing for Mastertronic Added Dimension.

"The titles are more advanced and complex than usual," explained Alison Beesley of Mastertronic. "*Spellbound* is written by David Jones, who wrote *Finders Keepers*, and is based on a

feel that the software market will have a transatlantic character. Indeed Firebird has two people out in the US now launching *Elite* over there."

"We're delighted to have made this deal - Beyond has a number of valuable assets and unreleased products.

Finders Keepers character, the magic knight. It uses a window and menu system and is fairly light-hearted in character."

The Hero of the Golden Talisman is an arcade adventure involving exploration over a number of screens, while *The Last V8* has you trying to control a souped-up old 50s motor car.

Spellbound is being released for the Spectrum, while the other two will be put out for the Commodore 64. They should all be in the shops by next week.

Ultimate's C64 latest

ULTIMATE PLAY The Game's latest offering will be a Commodore 64 game, *Imhotep*, due for release next week.

Set in ancient Egypt, the game features the adventures of Imhotep and the tasks he is given by the Gods.

Imhotep will cost £9.95.

Con trick

Good for Vincent Oliver (*Letters* October 3) I think that everybody with any real interest in the future of the micro industry should support him and other 664 owners. No matter how good a company Amstrad is, or how good its products are, it cannot kick sand into its customers' faces and expect to get away with it.

People with good memories will recall that Sinclair did a similar thing back in 1981, when the company continued trading ZX80s at £100 literally days before it launched the ZX81 at £70. But being, perhaps, the first case of its kind in the British micro industry there was not enough noise made about the scandal.

Now, however, consumers, hopefully with the backing of the micro press, have enough power to stop these outrageous commercial con tricks. I think that companies like Acorn and Sinclair are finally learning that customers must be treated with respect.

Amstrad is relatively new to the industry, but that is still no excuse for its refusal to even correct its mistake. So, if we want to stop this sort of thing happening again we must keep nagging Amstrad until it does the only honourable thing, and offers up-grades to disappointed 664 owners.

Fear the worst

With reference to the 'Great Value' item in the letter column of September 19, I would like to express my thanks to Ivor Spital for confirming that I am not a 'sucker'. However, I am still trying to work out what I should be, I have the feeling that continuing to be a sucker may be the better option. Perhaps I should take comfort in the fact that I supported British industry, I think, and stopped Amstrad making a loss on an obvious, and which could have been, expensive

mistake on its part.

I do agree that the 664 did appear to be very good value until Amstrad went one better and provided its own competition. Prospective buyers of the 6128 may like to reflect on the possibility of a '6256' at an even lower price for Christmas!

As to the continued support for the 664 machine, only time will tell, but I fear the worst.

Finally, whilst typing this letter, the shift key on my machine has decided to die in sympathy with its brother 664 micro computers.

£1m bingo?

After reading the issue of October 3, I have only one question: when are you going to introduce £1,000,000 bingo?

Robert Robertson
39 Milwood Drive
Mossend
Lanarkshire

At the same time as our readership reaches 4,000,000 and we introduce the Pouting Popular Pretties on page 3.

Excellent machine

I have just read Graham Taylor's favourable review of the Ibico LTR-1 printer, and thought your readers may be interested in my experience of this excellent little machine.

The LTR-1 has been available for some time at less than £100 from Typewriter Centre shops in the W Midlands area. Although it does look a little plasticky it is very solidly made; much better, I think, than the popular Brother HR5. The printer mechanism is beautifully made by ALPS, well-known for their printer/plotter units as used by Commodore, Atari, Tandy, etc. In fact the mechanism in the Ibico is virtually identical to that in the Atari 1027 printer (which retailed not so long ago at over £250), so mechanical spares and ink rollers may be fairly easy to obtain.

I have found that the boldest printing is obtained using a very smooth, soft paper, such as that marketed by Brother for use with their EP series of printers or for the HR5. The printing density is a little uneven (but still good) because the print head is not fully re-linked between each character.

Using a less smooth paper, such as typing bond, will give a rather less dense print - it takes less ink off the print head, but the variation in density will also be less.

With a little ingenuity, it should be quite possible to modify a paper roll holder (such as the ones available from Brother) and fix it to the rear of the Ibico to allow the use of 100ft rolls of A4 width paper.

To print the £ symbol, the Ibico expects to receive character code 123; on the Spectrum this corresponds to the left-hand curly bracket (Extended/shift/F).

From *Tasword* on the Spectrum it is possible to underline side-headings, if these are less than half a line long. Simply re-configure one of the control graphics characters to give a Carriage Return and place this control character immediately after the heading. Then type in the required number of underline characters. The Ibico will print the side-heading, do a carriage return without a line feed, then underline the heading.

Finally, don't be put off by the slow printing speed; even 12 cps is over 100 words per minute.

David Branston

Birmingham

Micro waves

Tomorrow's World was in its prime - sadly a few years past now - the finest example of an educational/scientific entertainment TV programme.

It carefully walked a tightrope between woosh-goes-the-rocket triviality and mind-numbing detail, the result of which was genuinely entertaining and informing half hour.

The production team of *Micro Live* should maybe take a look at some of those classic recordings. The first programme of *Micro Live's* new autumn series was almost totally lacking in sparkle with little to interest either the casual viewer or the micro enthusiast.

Just who are they making the programme for? The present up-market business slant will lose both the home micro audience and the interested general public faster than they imagine. Business micros make boring television.

Whenever I see Lesley Judd, I instinctively reach for the *Blue Peter* sticky-backed plastic. 'Very useful', she chirps after a look at computer maintenance contracts. Yes, it would be if I had a system worth over two grand... home micro maintenance never mentioned. More features like the speech synthesis demos and interviews with living legends like Bill Gates are needed... he produced the most interesting insight of the evening when suggesting that the present generation of microcomputers, 'for the price... don't satisfy.' A pity he wasn't allowed to continue.

The people behind *Micro Live* have set themselves the most difficult of tasks - they want to reach everyone across the computing spectrum and some beyond.

In doing so, I fear they are pleasing no-one.

Most home computers.

As you can see, the Amstrad CPC 464 is no ordinary home computer.

For a start, it comes complete with an integral cassette datacorder.

And in addition, you get the choice of either a superb quality green screen or a full colour monitor.

With £100 of free software to get you going all you have to do is plug in and start computing.

The 64k of RAM means you'll have plenty of memory to play with. And there are over 200 Amsoft games, that you

can play, many exclusive to Amstrad.

But games are only half the fun on the Amstrad CPC 464. In fact using it can also be quite an education.

The kids can learn spelling and arithmetic with software like Wordhang and Happy Numbers.

Whilst adults will love the way it helps around the house with budgetting and accounts.

Put the 464 to work and it will take care of a number of business-like functions, such as wordprocessing and spreadsheet.

The complete home computer.

To help you get the most from your CPC 464, there's the Amstrad User Club as well as a number of books and user magazines devoted to this most versatile home computer.

And your 464 will be made even more complete with the simple connection of joysticks, printers, disc drives, speech synthesisers and light pens.

But perhaps the most extraordinary thing about the Amstrad CPC 464 is the price.

Just £199 with green screen, or £299 with full colour monitor.

For more information about the complete home computer, all you have to do is complete the coupon.

More is less

Program Blue Max 2001 Micro Spectrum 48K Price £5.95 Supplier Cases Computer Simulations, 14 Langton Way, London SE3 7TL.

Blue Max 2001 is the sequel to *Blue Max*, quite a popular and successful title for the 64. This time you play the role of fearless Max Chatsworth IX who is directly descended from our original hero of the same name. This time around the mission is to penetrate the enemy defenses of the Time Masters who have captured Earthbase Gamma IV and are relentlessly pursuing you in strange craft intent on your destruction as you fly through the lunar-like landscape.

Apart from a jolly tune and a few beeps and blurps, the sound is not worth holding your breath for but the graph-

ics are quite impressive, consisting of bridges, craters, alien buildings and for some strange reason - cars! Bombing buildings amasses you points, along with despatching your pursuers with guns mounted, it seems, all around your strange helicopter like craft.

On beginning the game you start with a full fuel supply and 40 bombs, and they are replenished at certain locations around the planet. I quite liked the explosive effect of the bombs as they hit the ground and missing selected targets left a lifelike scar on the surface.

Just as a shoot'em up it's fine, although these days games are becoming a bit more sophisticated in plot and technique so if you're looking for a classic - don't look here. A worthy sequel? - not convinced!

Andy Moss

Myth is hit

Program Sorcery Micro Entersoft Price £7.95 Supplier Entersoft, 37 Bedford Square, London WC1 3HW.

This is it - *Rambo* for mages. A sorcerer must be sent to rescue his captive compatriots from enemy territory; a hostile landscape inhabited by hooded guards, floating boars' heads, flying tadpoles and a host more. It will be tough going - will you accept the challenge?

I say that you will. And when you've run out of power, or time, or drowned in the

water... I think you'll start all over again, because *Sorcery* is addictive in extremis. Three times I've pulled the plug to write this review - twice I've reloaded immediately. And I'm a hardened reviewer.

Game play is brilliantly well balanced; never impossible yet highly frustrating. It's fiendish to map the screens and it's testing to remember quite which object can do what where, ranging from frying baddies to unlocking doors. If only all arcade adventures were like this.

The game is also beautiful to look at, with colours so vivid they border on the psychedelic, and the spot sound

Learn chess

Program White Knight Micro BBC B Price £9.95 Supplier BBC Soft, 35 Marylebone High St, London W1.

Like chess? Learning chess? Then you'll love *White Knight* Mk. 12!

White Knight has been among the top micro chess programs for some time. Mark 12, for the BBC micro, is even better than its illustrious predecessors. For a start it plays darned good chess. The games can be fairly fast because while you figure out your own move the program makes an educated guess at what you will do (actually it only assumes you think two moves ahead and so it is not very flattering!) It is there fore planning its own reply before you have even moved. This can mean a pretty rapid game.

But playing is only part of the delight of this fine program. It will also help you learn the game. It can check any move for legality so you can try things out away from public view. The program can be forced to play itself - fun to watch if you slip in a few calculated moves of your own during the game and leave it to get out of the mess! You can even set up chess problems and let the program work out solutions.

The program allows you choices of colour for displaying the board pieces, choice of playing white or black pieces, moving by cursor keys or standard algebraic notation and a range of playing options. If you set it up to play its very best game you'll have a long evening ahead of you and a tough time beating it. For regular play I've seen nothing remotely like it.

Dave Watherson

What rabbit?

Program Magic Micro Spectrum 48K Price £8.95 Supplier Macmillan Software, 4 Little Essex Street, London WC2R 3LF.

Abracadabra! Nothing. Shazam! Less. Load. That's it, because now the conjuror's mystic machinations have joined forces with the micro in a package containing cassette and booklet.

I put on magic shows for the family as a kid - how they suffered as I predicted cards and vanished coins. A lot of those tricks are in the book, but they can make respectable parlour magic if well done; 90% of conjuring is patter - just as 90% of computing is jargon!

effects and opening music are excellent. But most important is the humour.

From the trapped wizards waving their arms to the bubbles and floating peaked hat as you sink beneath the waves after missing elevation over water, the game has oodles of character.

This is possibly the Enter-

I never had the computer as a prop, a high-tech familiar, 'though. The program contains a number of tricks, predicting numbers or chosen cards - hardly surprising considering the computer's number crunching ability. One trick is bugged and won't work at all. Others are merely logic puzzles or optical illusions.

I'd be wary of magic involving a micro - after all, to many people the speed of a processor is pretty magical itself. But junior Paul Daniels' could do worse than intersperse a few of these tricks among more traditional fare. And it's nice to see the Spectrum used for something other than alien-zapping, even if a bit more originality could have been applied.

John Minson

prise's finest yet; it starts to show just what a good machine it makes one more optimistic about future programs, maybe some originals even, written specifically for the machine - meanwhile this is a superb conversion.

John Minson

Adventure Reviews

Hello John

Program *Marsport Micro*
Spectrum Price £9.95 **Supplier** Gargoyle Games, 74 King Street, Dudley, West Midlands DY2 8QB.

With a determined tread Commander John Marsh stepped through the automatic door

into the corridor of Marsport. "Sometimes," he thought, "one man can succeed where an army fails." Succeeded? The safety of the Terrans depended on his success. And his safety depended on finding a weapon somewhere within the hive of corridors before the insectoid Sept caught up with him. The mission had started...

I have a sneaking suspicion that somewhere, lost through

the mists of time, lies a direct line from Commander Marsh to Cuchulainn, hero of Gargoyles' previous pair of Celtic adventures. Both are brave, beautifully animated... and stomp about in a fashion that makes Rambo look like Nureyev.

Still, there's nothing wrong with that. Anybody who failed to indulge themselves in the age of Irish folk heroes because they thought they didn't like past fantasy (bigots!) can throw themselves into an equally well realised future. It's a future full of problems to solve; mapping which you mustn't neglect or the use of four 'camera directions' will soon confuse you; and most importantly there's zapping.

The Sept are wonderfully horrible, and despite the ultra-wide screen view, have the unpleasant habit of appearing with minimal warning just as you round a corner, compensating for the ease of targetting them. It's

enough to make you jumpy but John Marsh's steps remain resolute.

As you're drawn deeper into the labyrinth you'll discover a variety of useful, sometimes invaluable, objects such as gun passes, charge units and factor units which allow you to manufacture new objects from component pieces. There are storage lockers and sealed doors to impede progress. Why did I ever volunteer for this mission?

I suppose it was because I have an aversion to being colonised by overgrown ants, led by a gross monstrosity with a deadly flicking tail. I suppose it's because I believe in freedom, decency and truth. It could be because this is such a great game. And it's definitely because I've got John Marsh on my side - God bless his intergalactic Doc Martens!

John Minson

Old soul

Program *Souls of Darkon Micro*
Amstrad Price £7.95 **Supplier** Tasket, 13 High Street, Bridlington YO16 4PR.

They say that magic was once as well respected as nuclear physics is today. But what happens when the old and new combine - a high technology society dabbles in powers that belong to the past? On the planet Megron it led to the unleashing of a terrible evil, the power of Darkon!

Into such a scenario you step, a bionic warrior with your robotic companion who will occasionally warn you of impending danger. At first the landscape is soft and gentle, an almost primitive deserted world, but littering it are the artefacts of an advanced civilisation.

Though hardly original, this basic premise of *Souls of Darkon* is sound enough and sets up memories of several SF novels and films. It's most stylishly presented too. At the top of the screen a text description, below a hi-res graphics window; to its right a log of your activities with

inputs below.

With its original typeface and somewhat stylised two colour illustrations it all looks very modern - a trifle Conran really. However, there will always be the debate over text vs words. At one location it is raining so hard that I sheltered under a tree (ie, an

open invitation to *Climb Tree*) but had the downpour stopped by the next location or was it just not mentioned?

There were one or two other discrepancies that I encountered which stopped the world being real. Despite the trendy presentation, possibly because of it, I found it all a bit

neutral and uninvolved. Still, you may think differently and it seems to have many of puzzles and reasonable variety. Perhaps it was all that rain dampened the fire of my enthusiasm.

John Minson

Gosh girls!

Program *The Secret of St Bride's Micro* **Spectrum Price** £6.95 **Supplier** St Bride's School, Burtonport, Co. Donegal, Ireland.

Here's something rather ripping. I woke this morning with the strangest feeling - just like being the new girl at school. Then I remembered - I am the new girl at school!

"St Bride's is set in the most beautiful Irish town and it's like I've stepped back in time, to an age when school was all blackboards, mortar boards, the three R's - and adventures! It's a really spiffing feeling.

"Still, there's something queer about it all and I intend to find out what. I think I'll

explore the place properly; look around the rooms, examine things, maybe even indulge in a little disguise (because you know what a good mimic I am). After all, when I scouted around last night I could swear we were locked in; the first thing's going to be that old oak door.

"I know that Ireland's the land of fairy folk but I've not met one dwarf yet, thank goodness. *St Bride's* is so fresh and original it's shaken me out of that boredom I fell into during the hols. And maybe it's the air but it all seems so vivid!

"I've been knocked over sideways by absolutely oodles of strange happenings, odd messages and other bamboozling events.

"How nice to know that I don't have to be a mighty male warrior because girls just want to have adventures

too. And now I'm going off on one of my own and it's got oodles of charm and spunk.

"Love to all - especially Rags, the dog.

For ever yours Trixie.
"PS - Apparently there are some *Unexpurgated Caves* I'll be able to find soon, which are rather like some old mainframe caverns I once knew, only very *silly*! I've seen a bit of them and they look fun!

"PPS - Uncle Bobby's got a terrible grump on at the moment, he says that *St Bride's* is taking pot shots at *Colossal Caves* which is terribly bad apparently.

"He says that adventures should be taken seriously and that *St Brides* isn't a new adventure at all. I just think he's a sour puss though."

John Minson

Into space

Program *Astro-Clone Micro*
Spectrum Price £7.95 **Supplier** Hewson Consultants Limited, 56b Milton Trading Estate, Milton, Abingdon, Oxon OX14 4RX.

Trouble with clones is once you've seen one you've seen 'em all! Still, that's not true of Steve Turner games because his sequel to *Dragonator* has done far more than blast Maroc the mage into space.

What he has done is revive those Seiddab warriors, nasties of an earlier Hewson's trilogy, and provided a tripartite game in which the earthlings strike back and set out to crush the alien menace in the wilds of space. You don't get multiple lives - you just get lots of clones. Lots of

clones so you can afford to lose a few. And you will!

The immediately recognisable part is the Ground Combat Phase, where you roam the rooms of one or other of eight planetoid bases, trying to neutralise their deadly power. Magic is replaced by a

laser gun, which is operated via a roving gunsight.

To get there you have to clear the airspace of Seiddab ships in the time honoured shoot 'em up style, with some beautifully scrolling starships.

You also have to command your forces round the strate-

gic map to keep the enemy at bay. So three very distinct skills are called for.

Much as I've admired Steve Turner's previous games this one doesn't seem so immediately pleasing. Maybe it's because it takes longer to get to grips with the greater challenge, but I also found that often screens were cluttered in both space and especially ground shoot 'em ups, with too little room to move around.

There's also greater complexity of movement, with one set of icon driven instructions for moving around, others for arm movement, which takes some getting used to. All in all it's a very busy game. Persist and I'm sure it has many rewards, even if they're not quite so immediately as in previous games.

John Minson

Sunny Spain

Program *Terrormolinos Micro*
Spectrum Price £7.95 **Supplier** Melbourne House, Castle Yard House, Castle Yard, Richmond TW10 6TF.

Dear All, Remember how you enjoyed struggling up the social ladder to the heights of *Hampstead*? Well, here we are in its sequel and it's more a ride in a runaway lift to the bargain basement of the Costa Narnanaleg.

Quite why we booked this I have no idea. I think it was because the hubby had dreams of all those topless lovelies he ogles every week on the TV holiday programmes. Of course he said it was because it was good value - but it's not that cheap!

Still, they did say they'd let us have a camera though they don't really let you have anything here - it's a constant struggle to succeed. You know the hubby's no David Bailey. He's struggling to get ten good shots but all he does is snap himself falling off ladders. I think we'll be lucky to survive the fortnight.

Love Beryl.

John Minson

Trio

Program *Knight Games I Micro*
Spectrum 48K Price £3.50 **Supplier** Black Knight Computers Ltd., PO Box 132, Chislehurst, Kent BR7 6LJ.

Knight Games I isn't a recreation for medieval nobles, nor even a chess program, but a compilation from Black Knight Computers.

Elevator and *Spectrabug* are both short and simple arcade types. In the former you race against time to defuse bombs in a sort of manic multi-story car park with lifts, the other pits your skills against the clock in collecting flashing blocks.

Tomb of Syrinx is longer; a multi-screen maze to zip around and nasties to zap while collecting musical notes and pieces of a guitar. With tiny figures and minimalist graphics, these won't warm the cockles of many hearts, let alone set the earth on fire. Still, at only £3.50 they're just about competent and may assume uncritical computing newcomers or ultra-Puritans who can't stand all this five star sophistication.

John Minson

Odd Manner

Program *Madcap Manor Micro*
Spectrum 48K Price £5.50 **Supplier** Gilsoft, 30 Hawthorn Road, Barry, South Glamorgan.

This adventure takes you back to the year 1933, you play the role of the famous Belgian, Inspector Le-Gles. After a hard week at the office, Lord

cover, have put an illustrated adventure and an expanded text only adventure on one cassette. However, the copy I played only contained the text adventure.

From what I saw of the initial screen, the graphics looked quite good, however the text did not live up to my expectations, advertised as crammed with atmosphere and humour, I thought at first I was playing the wrong game, where I asked myself, was the atmosphere, certainly not in

You are curled up in bed safe and snug at home. It is pleasant to relax after a hard day at the office/job centre/down the mine. (Delete which is inapplicable)

You can also see:-
An alarm clock

What next?

GET UP
You get up, go and do what you have to do, then get back into your nice warm bed.

Give me your command.

2

Algernon Stingy has invited you down for a long weekend at his country estate. While you are there, some dastardly villain has stolen Lady Ditchley's priceless ruby ring. Naturally, you are asked to find it.

Once again Gilsoft, according to the blurb on the back

the brief text descriptions. I was disappointed with this game, especially after playing, Gilsoft's recent release, *The Hollow*, I only wish the standard in *Madcap Manor* had been the same.

Roger Garrett

From myths to Moles

Martin Croft (ageless) visits dead famous Level 9

If there were an Adventurer's Hall of Fame, you can be certain that the Austin family would be in there along with *Popular's* own Tony Bridge and Infocom, the American software house responsible for *Zork* and a whole host of other titles.

The Austin's family firm, Level 9, is widely considered to be Infocom's British equivalent, producing high quality, challenging adventures that have a cult following. While Level 9's packaging is much simpler than Infocom's, the price is also far lower – under £10 as opposed to nearly £40.

Another similarity between the two companies is that both have moved into bookware, with games based on the works of best-selling English authors. Infocom has Douglas Adams' *The Hitch-Hiker's Guide to the Galaxy*, while in this country Mosaic has just published *The Secret Diary of Adrian Mole*, which Level 9 wrote around Sue Townsend's adolescent, angst-ridden creation.

So, suitably armed with my new Adri-

an Mole notebook, I made the trek down to the Austins' new location, in a picture-postcard village just outside Weston-Super-Mare.

Commercially, we're very happy with Mole," says Pete Austin, dynamic force behind the company – he and his brothers, Mike and Nick, work on programming and creating the games, while sister Margaret handles the distribution, PR and mail order side of the business.

"We're very happy with it as a design as well," continues Pete. "It's a very large adventure – a four part game on most micros, with each of the four loads being three months in Adrian's life. It's a 12 part game on the BBC because of memory restrictions."

The Austins are particularly pleased with the Commodore version of Mole, because, as Peter explains, "We've achieved a split screen on the Commodore without any flicker – a programming first, we think."

Mike, the trouble-shooter when it comes to tough programming problems, explains how a little lateral thinking solved this one. "We've used sprites to make a black bar over the flickering bit of the screen, so you can't see the join."

"In Mole, we have two tasks running at the same time – one is playing the game, the other is controlling the screen. There's a third task on the Spectrum, Amstrad and MSX, controlling a 100 character buffer. This means you can play the game in picture mode without taking hours."

"I've done an awful lot of research on Sue Townsend," Pete says. "I had to find out everything I could about her because I had to copy her writing style."

The Mole game looks certain to become one of the top selling games this Christmas – especially since Commodore UK has signed an exclusive distribution deal with Mosaic.

Commodore is using the game as part of its Christmas Compendium promotional package – obviously they have faith in Level 9's pulling power!

Part of the reason Level 9 games are so well known is that the company is always striving for perfection.

"We have a new text compressor," Mike enthuses, "which gives us near enough 50% compression – but additionally it eliminates the need for a key word table, which effectively reduces the finished code to 40% of the original."

A key word table is a list of the words the adventure understands – Mike claims that with the new compressor, they can handle 500 to a 1000 words.

"It's totally impossible to run our stuff on a Commodore type machine without compression," states Pete. "Infocom put their games on disc so they don't have to worry about compression – but disc games require access to minis or main-

frames, and Infocom are supposed to have spent over \$1,000,000 on DEC mainframes."

At the moment, Level 9's development work is done on Torch micros – but Pete says, "We may change to 68000 based machines at some point, possibly the QL, which will become an entry level 68000 machine once the ST and the Amiga are on the market."

Mike begs to differ: "We'll probably go for the 520ST, because it has a nice keyboard, it's cheap, and it will have a large installed user base in the US."

"The game we will be producing next year will all be in four separate loads, because we are going Infocom hunting," Pete claims. "When we have brought out games that are demonstrably better than Infocom's, we will start selling them to the States. We know that next year's games are going to have more text, because they hardly fit onto a 5" disc."

Level 9 is also branching out into a different area – Pete is working on a scenario for a multi-user, play by modem adventure game, for an as yet unnamed company. Instead of running on a micro, and so having to fit into a very limited amount of memory, the database and interpreter will be on a mainframe, which players can contact using their own micros and a modem.

The game will be set in Arthurian England, and will contain some 10,000 locations, with space for up to 1,000 players who will start off as what Pete calls "lowly beings".

Geographically, the fantasy England will correspond closely to the area around Level 9's new location; Glastonbury is not too far away, nor is Cadbury, rumoured to be the site of Camelot.

The game will also feature a realistic calendar, with one real month equalling a year in game time, according to Pete. "For example, there will be a Druid's Grove where you have to pick mistletoe on Midsummer's Day, which will happen once a month. If you are not logged on at the right time, then tough – the Druid's Grove is closed until next year!"

At the same time as Pete is working on that project, he will be designing a massive game for Level 9.

"A large part of both projects will be working out how to handle artificial intelligence for the non player characters and monsters."

The next adventure to be released as a Level 9 game will be *The Worm in Paradise*, the fourth in the popular Silicon Dream series, which is scheduled for October 23.

Following that, the sequel to *Red Moon*, which Pete calls *The Price of Magic* and Mike insists should be *Red Moon Two*, is due before Christmas.

In 1986, Level 9 will return to Middle Earth games – Pete is tired of science fiction. The first game for next year, he says, "will be a *Hobbit* basher, a humorous adventure so big it will make *The Hobbit* look small".

The ruralist Level 9 team

an Mole notebook, I made the trek down to the Austins' new location, in a picture-postcard village just outside Weston-Super-Mare.

"Commercially, we're very happy

When it comes to computer games you can't beat an Amstrad.

We've enlisted the help of some particularly wicked program designers to put our entertainment software range together.

They've come up with over 200 Arcade and Adventure games.

Many of them exclusive to Amstrad (like those shown above). All of them mindbenders you'll find hard to beat.

And all at prices that are as competitive as the games, from £12.95 on disc and £8.95 on tape.

But the software is only one of many good reasons for buying an Amstrad computer.

The 64k CPC 464 computer comes complete with built-in datacorder and a choice of green screen or full colour monitor.

The CPC 6128 is a big memory 128k computer with built-in, fast-loading disc

drive and again, it's own colour monitor or green screen.

Both are available at an all-inclusive price you'll find hard to match.

In fact, with Amstrad's unbeatable software, unbeatable hardware and unbeatable prices, how can you lose?

PCW/S/1

The Adventurer's Accomplice

Welcome to the *Popular Computing Weekly* bumper collection of adventure tips. We believe it's the most ever assembled in one magazine. The adventures are deliberately not in alphabetical order; if you really want a clue you'll have to hunt for it!

Red Moon

Need the coins? - Wave the horseshoe.
Blinded by flashing lights? - Drop the black ball.
Cloaked statue upsetting you? - Try wearing the cloak.

Bored of the Rings

Stuck at willow tree? - Shout for help.
Problem with a Basilisk? - Wear the sunglasses.
Want to open the box? - Use the magic scissors.

The Helm

Psyk a menace? - Shine torch.
Can't find the tiny key? - Sieve flour.

Subsunk

Tap a problem? - Plunge basin.

Adventure Quest

Balrog in your way? - Smite bridge with sword.

Quann-Tulla

The crane kills you? - Carry lead ball.
High voltage - Shocking! - Wear cloak.

Kentilla

Stone stops you progressing? - Insert rod.
Stone door a worry? - Open bottle.

Castle Blackstar

Wraiths deadly? - Try saying 'friend' to a mirror.
Need to fly? - Use the broomstick and say 'Abracadabra.'

Zork-1

Cyclops blocking your way? - Feed him.
Not found the Scarab? - Dig harder!

Snowball

Slipping on the ramp? - Use the cat.

Gremlins

Stripe eluding you? - Post flashlight.
Pipes a problem? - Joint the pipes.

Pen and the Dark

Need some objects from the stores? - Type 'Nuts': Type 'Searchlight' etc. then use the code, which is G2556.

Four Minutes to Midnight

To drive bus - Find Sue.
To save Dave - Recruit Dave then out.
To take Sue through tunnel - Knock her out and carry her.

In Search Of Angels

Need Notebook - Search Miller's pockets.
Can't find Miller - Try the Thames.

Ice Station Zero

Guard a problem - Push crates.
To get rid of bird - Play recorder.
To escape natives - In at fossilised tree.

Greedy Dwarf

Killed in the dark - Find tinderbox and lamp.
Spider kills you - Use Elvin sword.
To return from muddy maze - Say 'KAZAD'.

Hampstead

Looking for a credit card - Sit on bench.
Cabinet a problem - Open desk in furniture department.

Planetfall

Need a key - Curved bar over crack.
Need the lower elevator card - Try Robot.

Hitchhikers Guide

Don't know what to do with fluff - Find the flowerpot.
Flying brick kills you - Lie down.

Castle Blackstar

Boat sinking - Bail boat.
Oil runs dry - Go East from island.

Swiss Family Robinson

Stuck at first location - Go below.
Stuck below - Go topside.

Transylvania

Need the key from goblin - Feed frog with flies.
Want to read a message - Use acid from witches hut.

Witches Cauldron

Looking for red ribbon - Try the padded cell.
Need a skeleton key - Use skeleton.
Need a wand - Find the pencil.

Mordens Quest

To cross quicksand - Drop blanket.
Underwater you must - At basin go N.N.N.E.U.P.DOWN.N.E. then Fill aqualung.

Bored Of The Rings

To get rope - Say Hog.

Castle

To cross chasm - Fly chasm then flap arms.
Animal a problem - But it.
Insect runs away - Use jar.
To go past wall - Go hole - with torch.

Fantasia Diamond

Brown door closed - Knock.
Secret Door - Ask Boris to pull lever.

To open tapdoor - Hit it.

Great door closed - Talk to sentinel.

Golden Apple

Smell the flowers - You'll sneeze but . . .
To get lamp - Pull lever.
Sleeping a problem - Cover mouth with hankie.

Hulk

To get rid of bees - Wave fan.
To find gems - Dig under all domes.

Inferno

Wind blows you back - Crawl South.
To find stone - Dig in third circle.

McKenzie

To get out of cell - Do an inventory.
Laser gun won't work - Power pack.

Urban Upstart

To get past fan - Give lager.
Stuck in jail - Wait.
To enter Town Hall - Carry red tape.

Spiderman

To get past Hydraman - Freeze him.
Need the Bio-Gem - Cast web from hall.
Mystified over Mysterio - Feel around.

Twin Kingdom Valley

Trapped in Dungeon - Use the diamond.
To find secret passages - Have a drink at Watersmeet.
Strength failing - Have a swim.

Colossal Adventure

To get bird - Need cage
To kill dragon - Fight Dragon
Witts End - "Drop Gazette" - then keep going South.

Adventure Quest

Wolves - Get off the ground.
To climb tree - Must have something that no one wants (nothing).
Desert - Carry water and when worm gets close - wait.

Lords of Time

To get keys - Pander to narcissistic vanity to improve your attraction.
To get diamond - Be cruel to be kind, in a willow way.
To change time-zones in clock - Turn cog 1 (etc).

Snowball

Nightingales - Keep a closed door between you and them.
To reach Trapdoor - Stand on a coffin.
To get out of mortuary area - Climb up (or down) from inside lift.

The Adventurer's Accomplice

Return to Eden

To avoid explosion - Dig at molehill then Go down and sleep in cave
To pass Leviathan - Need fungus when brick coloured bird appears - Drop sweetpea egg get plant egg enter house get fungus.

Erik the Viking

To launch ship - Blow horn to summon help.
To mend leak - Need hammer, nails and planks (smash tables).
Maelstrom - Throw plug.

Red Moon

To get crown - Search outside locations.
To drain lake - Turn handle
Rat - Don't go near it.
To open tower door - Say 'Humak'.

Emerald Isle

To get out of parachute - Release parachute.
To enter palace - Need ermine robe
To make canoe - Need manual, axe and log.
Darkness - Do not go down the mine without a light.

Golden Baton

To find sword - Exam leaves.
To find rope - need sword Chop briars.
To find ring - at oak tree Throw rope Climb rope Get ring.
To find key - Wear ring Rub ring.

Time Machine

To enter house - need glove (worn) Smash window.
To find key - Exam painting.
To find crowbar - need key Open drawer Exam drawer.

Arrow of Death (Part 1)

To find rope - Exam courtyard.
To reveal secret passage - At kings chamber keep turning coat of arms.
To find coins - Exam bed Cut pillow (need sword) Exam purse.
To get armour to top of scree (ledge) - Tie rope (to hook) Hook armour Get rope.

Arrow of Death (Part 2)

To find flint - Dig at southernmost featureless plain (no shovel needed this time).
To reach narrow ledge - need weird shrub at edge of chasm jump.
To get down from bridge - need helmet (worn) and shrub at middle of bridge, hold rope, cut rope.

Escape from Pulsar 1

To find light rod - Move couch.
To find key - Exam Couch.
To find circuit board - at crewmans quarters (south) Close door Go bunk Move pillow.

Dust! - on bunk by air vent Go vent after watch shows even number.

Feasibility Experiment

Lions - need leather shield to stay alive and need scimitar to kill lions.
To get brazier - need gauntlet (worn).
To kill gladiator - need short sword.
To get down from lip of chasm - Tie rope (to tree).

Wizard of Acryz

To secure spectacles - Fit chain.
To find sandals - get painting.
To find sword - Exam stair.
To progress to next part of game - Go chest (linen).

Perseus and Andromeda

To find discus - Give water to beggar.
To find helmet - At cave Exam statue, Throw discus (at statue).
To find sandals & shield - Need discus, Pray at temple and altar.
To fly - At on pedestal need sandals (worn) Wait.

Ten Little Indians

To stop train - Wait.
To get down from old wharf - Stamp foot then swim.
To get into garden - At gate tower Tie rope, Climb rope.

Waxwork

To find aqualung - Answer question at Cousteau exhibit then search hall of mirrors.
To find gun & bullets - Exam jacket To find key - Exam seats (at leisure lounge)

Circus

To find starting handle - at field need shovel Dig.
To find flashlight - Open boot.
To make safety net - Exam rope Get net then Erect net.

Mountains of Ket

To earn more money - Buy axe Chop Log Sell logs (to cartographer) then Sell axe.
To progress East from village - Need horse.
To make friends with dog - Feed dog

Temple of Vran

To return through sacred ground - Kill wart when it throws acid the first time.
To move elephant - Elephant follows you when you have peanuts.
To cross quicksand - need bow, cane and vine

Final Mission

To leave first cell - Stand chair Smash window Up.
To leave second cell - Drop ring under hole in roof.
To kill slime - At cubby hole Wait (6 times!) then Drop soap.

Spoof

To reach lighthouse - Answer phone Follow Dave after saying Yes
To get down after taking golden fleece - Down rope.
To get grail - In Inn Talk.
When changed into frog - go straight to witch's hut to find cure.

Robyn Hode (Runesoft)

To get key - at Great North Road (Nobleman present) - Rob man.
To get bow and arrows - In well Exam niche.
Village Square - this is a trap the villagers are King's soldiers.
Small Hamlet - Give gold.

The Journey

To make friends with elf - Give knife.
To make friends with warrior - Kill some 'hostiles'.
To make friends with the wizard - Give him the wand.

Volcanic Dungeon

To extinguish flames - Need dragon's tear.
To take Medusa's head - Need magic sack.
To cross collapsed bridges - Need magic carpet.

Woods of Winter

To get Light at start of Game - Tie rope to bucket at edge of pit, lower bucket.
To wear slippers - Eat mushrooms.
To open Box - Drop box from top of tree.

Tir Na Nog

To banish (temporarily) Sidhe - need 2 weapons carried. Lunge.
To open X-door - Need bones.
To pass wights - Need jewel of same colour as cave.
To finish game - Drop the 4 parts at altar then drop Calum's hammer.

Dun Darach

To get money (fast) - in Ludum save (to tape) frequently.
To get Scrolls from thieves - Give philtre to all three.
To stop thieves robbing you - Carry a licence.

Castle Blackstar

To enter castle - At drawbridge Fire arrow
To raise portcullis - Turn wheel in equipment room
To lower chandelier - Turn wheel in store room
To scare away eagles - Play violin (need bow)

Pharaoh's Tomb

To enter cave - Push rock then Yes
To pass through magic panel - Rub ring (need ring (worn))
To pass through secret passage - Need

The Adventurer's Accomplice

Cloak (worn)

Magic Mountain

To open door (by Bamboo) - Pull bamboo
To get your lucky sign - Dwarf Tell fortune
To catch lizard - Need soft shoes

Knight's Quest

To make friends with dwarf - Kill elves (need sword).
To make friends with dragon - Feed dragon or give food.
To pass giant - Need dragon with you.
To get on to ferry - must not have dragon with you.

Colditz

To cross floorboards - Remove floorboards first.
To get key - Open drawer.
To find tunnel - Move bunk.

Greedy Gulch

To find long poles - In barber's shop lift board (need light).
To get mao - In assay office get Zeek.
To find water - Use pump (three times).

The Hobbit

To get out goblin's dungeon - Thorin or Gandalf must carry you.
To answer Gollum - Don't kill as soon as you met him!
To pass through magic door - Need ring (worn) wait until Elves open door.

Hampstead

To find UB 40 - In lounge exam room.
To find key - In kitchen exam room.
To ride bike - Need bicycle clips Catch train from Platform 1.

The Village Underworld

To climb pylon - Need rubber suit (worn).
In freezer - Need fur coat (worn).
At bottom of hole - The numbers on the sign are the directions of safe exits as on Spectrum cursor keys eg 8 = East.

Bored of the Rings

To enter Morona Gate (end of Part 1) – Drop pepper.
To get coin – at Troll's machine insert battery Get coin.
To get out of maze – Must have map.
To pass gays – Drop poster.
To get rope (Part 3) – Say hog.

Quest for the Holy Grail

To enter Camelot – Need baseball glove (after unlocking door).
To stop wide oak door closing – Need wedge (carried).
To pass Eugene – Need Jester's hat (worn).
To pass rabbit – Need phrasebook, armaments book and paper and grenade. Read book before you reach rabbit then at cave entrance Throw grenade.

Sandman

To find brass key – At bottom of stairs lift mat.
To kill vampire – Need hammer & stake
To get gun – Shoot target.

Pen and the Dark

To leave space ship – Read letter Exam screen (until ship lands) Go aft.
To get ski suit – Exchange voucher.
To get ID card and dossier – need thermometer & stone in pen exam

thermometer Throw stone then return to Courtney's office.
To enter crawler – Go crawler.

Mindbender

To leave cell – Open trap Press button Leave.
To move around after power cut – Open manhole before powercut.
Lift to West of foyer – This is a trap! Do not enter this lift.

Mordon's Quest

To find Mordon – Climb drainpipe then return to hall.
To cross quicksand – Drop blanket.
To pass through waterfall – At altar sacrifice frog need frog & dagger.
To use transporter – Beam (object).
To survive more than 6 moves under water (with Aqualung) – At Basin go N N N SE UP SE then go Down NE then Fill Aqualung.

Eye of Vartan

To get flute and axe – Steal flute Steal axe.
To get hemlock – Pick hemlock.
To get acorns – Gather acorns.
To pass bear – Need staff Strike bear Explore cave.

Smuggler's Cove

To find barrel – at mound of earth Exam mound then Smash barrel (need hammer).
To get lifebelt + crisps to lake – Float crisps where steam disappears into hole.
To pass east of altar – Move candle.

Robin of Sherwood

To leave cell – Stand Pris when guard appears Grab ankle Choke guard Search guard Get sword Slide bolt Open grate Go out.
To find Bow and Quiver – Enter waterfall.

Forest at World's End

To cross chasm – Drop log.
To get into boat – Climb into boat to cross river – Row boat then climb out of boat.
To get down precipice – Blow horn.

Jewels of Babylon

To reach Beach – climb down ladder row north.
Crab – At rock pool return to Canyon (crab follow you) at canyon shout.
Lion – in jungle give fish to lion.
Cannibals – at cannibals village give watch.

Message from Andromeda

To open panel – In mirrored room Point rod at plate.
To get down from blue room – need sphere Place sphere on dish.
To clear rocks – at East end of cavern – Drop explosive go to West end of

cavern Press button.

Heroes of Karn

To kill swamp lizard – need tinderbox light gas.
To pass firegates – Must have drunk white potion.
To find ruby – Need box in snake room open box.

Warlord

To get into pool – Jump into pool to leave pool climb out.
to get meat – Need iron give iron to trader.
To pass guard – need salt give salt to guard.

Funhouse

To pass gate – Climb gate.
To leave pit – Exam water.
To enter ghost train – Drop ticket.

Adventure 200

To get thro' narrow opening – Must not have Axe.
To pass troll – Throw coin.
To stop Farmer killing you – Water plant (with seawater) after you have been up plant.

Valkyrie 17

To make rope – Tie sheets.
To leave hotel – Tie rope in Room 21.
To learn how to ski – Read book.
To get money – Pawn necklace.

Marie Celeste

To open grille – Need screwdriver unscrew grille.

Adventure

For our adventure special issue – a full size adventure for the QL by Philip Sproston

Adventure is a graphic adventure where you must find all the pieces of an ancient treasure chest. The program includes user defined characters, pixel movements and a text window, with full instructions on-screen. It is easy to play, but not so easy to beat!

The pieces are hidden in an old under-

ground building consisting of ten levels. These pieces must be placed in a special order to work out and reveal the secret passage on Level One, so that you can get out of the building. Within the building there are various things to help you, but there are others not so nice. How far can you walk is determined by your ability. If you reach 0%, then you are

dead – and have failed in your quest.

The remainder of the listing and program notes will be published next week. Meanwhile, if your fingers don't feel up to it, copies of the game can be obtained by sending a formatted microdrive, plus £3.50 to Philip Sproston at the following address: Quantum Soft, Marloes, Borrowby, Thirsk, N Yorkshire YO7

Opening credits

Create opening and closing titles for your latest video epic on the BBC computer – with the help from **Andrew Heptonstall**

With the reduction in price of video recorders and cameras, people increasingly produce their own video films. Here are two programs that will enable you to add opening and closing captions at the start and end of the video film, if you own a BBC computer.

To wire the computer up with the video recorder, you should connect the *R/F Out* on the BBC to the *R/F In* on the VCR (video cassette recorder) and the

R/F Out on the VCR to the aerial socket of a television. (See Diagram 1.)

You must then tune the TV into the VCR using its test signal, and then the VCR into the computer. When this is done, you will be able to see the BBC's output on the TV screen.

Run the "Opening Titles" program, and press play/record on the VCR. When the screen is clear, press stop on the VCR and record your film in the normal way using your video camera.

Then connect the computer up again (as in Diagram 1) and load and run the "Closing Titles" program, and record the output as before. The results of your efforts can be checked by rewinding and playing the video cassette.

By using the same wiring methods, you can record anything – even animation if you write the appropriate software.

Program Notes

Obviously all the entries in the programs can be changed to allow you to enter the name of the video film and the names of the people that did the jobs. Up to three names for each job can be entered in the "Closing Titles" program, and should be placed between the last three inverted commas in the lines between 200 and 250. The first set of inverted commas contains the job title.

Diagram 1.

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 2200 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but ALWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantees that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** Tapes supplied with conversion instructions.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 30 (+16K), AMSTRAD, BBC B, Atari (16K), ZX81 (16K), Dragon, Apple II, ELECTRON.
PRICE £15.00 (all inclusive)

FIXGEN 85/6

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1985/86. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £16.50 (all inclusive)

COURSEWINNER v3

THE PUNTERS COMPUTER PROGRAM

You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc. etc. It outputs most likely winners, good long odds bets, forecasts, tricast etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date.

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC B, AMSTRAD, Atari (16K), Apple II.
PRICE £15.00 (all inclusive) includes Flat AND National Hunt versions.

The Patch

for use with
The Quill & The Illustrator

For the Spectrum 48K ~ £5.99

The Patch allows you to modify the code of a final adventure produced with The Quill and The Illustrator so that "Split-screen" Text/Pictures are displayed when the adventure is played - plus it provides a number of additional routines as follows:

- * 6 new sound effects - a telephone, sirens and 'white noise'.
- * Alternative typefaces during the running of an adventure.
- * Fancy clear screen routine.
- * Control of "objects conveyable" during an adventure.
- * "Super-Quit" and "Crash".
- * Different key sounds and picture on/off control.
- * RAM game position SAVE and LOAD.

None of which (except alternative typeface) uses any additional memory!

POPULAR COMPUTING WEEKLY

Fill in the blanks

Make your own adventures with this program for the Spectrum by **Hugh T Walker**

This program sets out to give a skeleton framework on which a Basic adventure game can be written by filling in the blanks (hence the title).

When the listing has been entered and tested, the dummy locations and object data may be deleted as these are only included as an illustration of the program's operation and as a means of testing it. The program may then be cleared and saved to tape, from whence it may be loaded as a utility, thus saving about two hours sheer slog when starting to create your next masterpiece.

Naturally, the simple variables and arrays in the initialising routines will need to be re-defined to tailor the program to the particular needs of the new creation, with appropriate alterations to the Data lists in Lines 9000 et seq..

The Command Analyser (or Parser) should be adequate for most needs but it should be noted that as this uses an expression to control the *Go to* or *Go sub*

it is not suitable for the finished game to be compiled.

The intransitive verb routines are called by *Goto* instead of the more efficient *Gosub* because most of these verbs may end in the game being restarted and the program does not *Run* to restart.

The reason why the program does not *Run* to restart is so that, once the programmer is satisfied that the verb and object arrays are complete, the initialising routines and Data lists may be deleted - making sure that they have been initialised before you do this! This will gain a considerable amount of memory for game development, of course, within the limitations of those verbs and objects and subject to the program not being *Run* nor *Cleared*. This latter condition gives an indirect degree of protection.

The finished game may be further protected by *Poke 23659,0* since I have avoided using the Spectrum Rom routines for *input* and *Cls* - it is neces-

sary to, temporarily, remove this protection in the 'Save' routine (Lines 4200 et seq.) but the additional protection of *Poking* both *Repper* and *Repd* to 1 will leave the hacker with a keyboard that, if not impossible, will be very difficult to use. There are, of course, more subtle means of protection available to machine-code initiators, but this is Basic!

Program Notes

Line No	
10 to 90:	Reserved for title <i>Rems</i> and <i>Def Fns</i> .
100 to 900:	Reserved for subroutines called during game.
1000 to 1090:	General Status Table (eg. Have you won? or Are you dead?)
1100 to 1990:	Get next command, analyse it and act on it if valid.
2000 to 2048:	Move to new location - if valid exit from old location.
2050 to 3990:	Reserved for transitive verb subroutines - blocks of 50 lines each.
5000 to 5990:	Spare (eg, use for Combat routine and/or amplify verb routines eg, EXAM)
6000 to 6090:	Location descriptions and location-dependent status tables - blocks of 10 lines per location.
6100 to 6990:	Spare (eg, more locations ??)
7000 to 7990:	End Game messages and Play Again? routine (+ potential

8000 to 8090: spare space)
8000 to 8090: Print title screen, set up permanent colours etc.
8100 to 8290: Initialise variables and Read Data for arrays which do not alter during game
8300 to 8390: Instructions or scenario.
8400 to 8990: Reset variables and arrays which alter during game, for each new game: Either by Loading a saved game or by re-initialising and calling main loop (at 1000) via 'LOOK'-routine at line 4000.

9000 to 9490: Data lists for arrays initialised by Lines 8100 to 8290
9500 to 9890: Data lists for arrays initialised by Lines 8500 to 8590.
9900 to 9950: Save "adventure" to auto-run at line 8000 & Verify.
In lines 4200 et seq & Lines 4250 et seq, the array X\$() is a 'dummy' array used to collect together any simple variables and short arrays which need to be saved, thus reducing the number of files which need to be saved. The dimension of X\$() and the routines in which it is assembled and disassembled will have to be altered according to the particular

needs of each individual game.

The commands to Save and Load are entered as '*SAV' and '*LOA', respectively, to allow the verbs Save and Load to be used in the game.

Note: The analyser reads only the first four letters of each word - words of less than four letters have spaces added to allow them to be recognised. Naturally, if the verbs Save and Load are not to be used as transitive verbs, the asterisk is unnecessary and 'SAVE' & 'LOAD' may be substituted.

More details and the final part of the listing, next week.

SPEEDKING

**A Major Breakthrough
In Joystick Design**

BREAKTHROUGH

A totally new design gives instant response to your command movements

BREAKTHROUGH

Up to now Joysticks of the Speedking quality are priced at £20 and over. The Speedking is microswitch based, and costs only £12.99 £14.99 for BBC & DRAGON machines

BREAKTHROUGH

Designed to fit your hand, not the table top, meaning comfort during the longest of games

GUARANTEED FOR TWELVE MONTHS

**Available for Spectrum 48K and Plus
Commodore 64,128 and Vic 20
Atari, Electron, Amstrad, BBC and
Dragon machines**

AVAILABLE IN LEFT & RIGHT HANDED MODELS

**Trade and export enquiries

HORIZONS show

We're organising a weekend of fun, information and bargains. There will be events for everyone to join in, advice centres to answer all your questions, competitions with great prizes, discount schemes and personalities.

Use the coupon below and not only will you get into our 'fast' lanes and miss the queues but you save £1 per ticket as well.

Editionscheme Ltd., HR House,
447 Finchley Road, London N12 0AF.

**More an experience
than just a show!**

NEW VENUE!

**Tech West Centre
Warple Way
Shepherds Bush
London W12**

Complimentary buses from
Shepherds Bush and Novotel.

Tubes: Shepherds Bush, Acton Central,
Turnham Green

Editionscheme Ltd., HR House,
447 Finchley Road, London N12 0AF.

Please send _____ Adult tickets at £2 and _____ under
sixteen tickets at £1 for 'Commodore Horizons Show'.

I enclose cheque/P.O. to the value of £ _____

payable to Editionscheme Ltd.

A tight squeeze

Just the thing for those graphic adventures – an all-purpose graphics compression routine by **Adrian Warman**

A trend in software today, particularly graphic adventures, is to have high-resolution pictures to accompany text information. This article considers a way in which high-resolution images can be stored in a format other than their 'pure' bitmaps. In doing so, it will be shown how compression by factors in excess of six times can be achieved.

The algorithms are presented in a pseudo-Basic, in order to preserve machine-independence. However, notes are provided to make the set of listings easier to understand.

The Problem

Bitmap high-resolution displays have the snag of requiring large amounts of RAM for their storage. For example, the BBC computer takes up to 20K for its highest resolution, and the Commodore 64 take 8K plus extra for colour information.

The easiest method of keeping a copy of a display is to store the bitmap in its entirety. Unfortunately, if the screen contains comparatively little information, or if the image is regular or repetitive, then there could well be a large amount of redundant information being stored. For example, consider a circuit diagram on a sheet of paper. The actual amount of ink used is very small in comparison to the paper area taken. When memory is important, a smaller storage use can be very advantageous.

The Algorithms

The algorithms presented below attempt to provide an alternative method of storing bitmap information. However, there are a number of points which must be kept in mind. Firstly, although the algorithm can achieve an excellent degree of compression, there are patterns which can vastly increase the storage used in comparison to simple bitmap storage.

Secondly, although the expansion algorithm ('xpan') is quite fast, the compression algorithm ('shrink') can take some time. This effect is dependent on exactly how the algorithm is implemented. Running the same algorithm on the same machine but in different languages, I have timed compression for the same image as taking from six to 30 minutes. Decoding takes roughly the same time as reloading the entire bitmap; again this is language dependent. To show the worth of the algorithm, it is interesting to note that the image that gave the above timings was compressed into less than an eighth of its pure bitmap size.

The compression is achieved through a very simple process. It is assumed that

the screen pixels are either 'on' or 'off'. The actual number of adjacent pixels on the row in the same state is recorded, rather than each individual bit.

Starting from the base corner of the bitmap display, the 'status' of the current dot is inspected. For a simple monochrome display, it is assumed that the integer value '0' represents 'off', and '1' represents 'on'. For colour displays, the status could be (say) the colour number found at the dot position.

Once the status is established, the algorithm searches along the row, looking for adjacent dots in the same status. If the status changes, the count so far is stored in a file. If a mono-colour display is used, only the count need be stored. For multi-colour displays, it is suggested that the old colour number be stored along with the count. (For more informa-

tion on this, see the program notes below.) The change of status is noted, and the count restarted. This continues until the end of the display is reached.

When the display pattern consists of lines or dots or blocks, this technique generally results in a significant size reduction compared to pure bitmap storage. However, for some images (for example, Figure 1) continual changing of dots in close proximity will mean excessively large storage files. In general, it appears that if the numbers being stored in the file have an average value less than the number of screen display bits per byte, then the algorithm is not producing a worthwhile amount of compression. Unfortunately, there seems to be no way of predicting whether a given display is suited to compression, except by trying it.

Finally, the Basic conforms mostly to Microsoft standard in order to emphasise the fact that the algorithms are *not* machine-dependent. One exception is that variable names have been chosen that do not necessarily differ in the first two characters. It was decided that the user could better understand the flow of the algorithms by the use of meaningful variables; and besides, it was unlikely that the names would suit everybody. Any other difficulty would concern the sequential files or graphics, but these are fully explained in the notes below. As long as your computer can do high-resolution displays, and manipulate simple sequential files, the algorithms will work.

Program Notes

Naturally, graphics commands vary from machine to machine, so certain assumptions have to be made regarding the plotting and inspection of points. For this reason, some lines within the algorithms contain references back to the notes for explanation of exactly what is required. As long as it is possible to plot lines in foreground and background colours (the latter possibly being interpreted as 'reset' points on the line), as well as to use a function to inspect the status of individual points, there should be no difficulty.

'Shrink' Algorithm

1030-1040 - 'Width' and 'height' are set up here, and used throughout the algorithm. If your screen has different dimensions, simply alter the numbers accordingly.

1070 - Some languages require that the hi res screen be active at the time of performing any graphic command. If so, suitable commands should be added here.

1100-1119 - Even in Microsoft, there is little standardisation regarding sequential files. This line simply opens a sequential file which can be written-to, with the file-name 'storage', and referenced within the program by the term 'file 1'. Replace this line by the equivalent on your system.

1120-1130 - Start values assume that no pixels have been found, and that the program is currently looking for pixels in the background colour.

Figure 1.

1160-1170 - Loops 'row' and 'col' control the inspection of each point on the hi res screen.

1200 - Call a subroutine to inspect the contents of the current pixel. 'Found' is set to '1' or '0' depending on whether the pixel is set or not.

1210 - If the pixel found is in the same state as its predecessor, increment the count, and loop round for again.

1230-1250 - The current pixel is in a different state. Output the count to the sequential file (Line 1230), restart the count, and set the new status being looked for. If multi-colour is being used, the current colour should be filled along with the count, and the new colour found labelled as the new state.

1270-1280 - The end of the loops to inspect each pixel row by row.

1310 - Close the sequential file.

2000 - The function *Pixel* (*x*, *y*) is assumed to return a number that reflects the state of the pixel at (*x*, *y*). This has been placed in a subroutine since it will probably need to be altered for the specific system. The only restriction is that 'found' must be set to '0' if the pixel is in the background colour, and '1' if in the foreground colour. If the display is multi-colour, then the *Pixel* function will probably return the colour number instead, and this should be assigned to 'found', for use as described in the notes.

'Xpand' Algorithm

1000 - 'Width' and 'height' are declared as in the 'Shrink' algorithm.

1070 - Some languages require the graphic screen to be active while drawing or plotting. If so, suitable commands should be added here.

1100-1110 - This line simply opens a sequential file which can be read from, with the filename 'storage', and referenced within the program by the term 'file 1'. Replace this line by the equivalent on your system.

1120-1150 - 'Status' is initialised and assumes that the first group of pixels will be in the background colour. 'Xnow' and 'ynow' are the pixel co-ordinates of the start of the current block of pixels in the current colour. 'Ynext' is the y-value of the end of the block, and is required to be defined by the algorithm at this point.

1180 - EOF is a function usually present in most Basics. It simply returns True or False depending on whether the file contains no more data (EOF stands for End Of File).

1210 - This line gets the next value of 'count' from the file. 'Count' holds the length of the new block of pixels. If a multi-colour system is being used, the line should be replaced by (for example): Input File 1: Status, Count.

1230-1250 - Calculate the column number of the end of the next block. It is possible that a wrap-around effect could occur if the current block 'falls-off' the end of the row. Line 1250 tests for this condition, and if found modifies the end co-ordinates of the block.

1270 - If the current block lies completely on the current line, then go and draw it.

1290-1320 - The next block does not lie entirely on the current row, and so it must be split into two. These lines set up the start and end co-ordinates of the block sub-sections, and call the subroutine to draw the line in its correct colour (depending on the state).

1330 - Skip over the case when the block lies entirely on the current row of the screen.

1350-1360 - Draw the entire block, since it fits entirely on to the current line. The start and end co-ordinates are set up in a similar fashion to the above.

1390-1410 - Make the end of the current block to be the start of the new block. Since we have reached the end of the current block, the status must be changed. For single colour displays, the Line 1410 remains unchanged, since state zero becomes state one, and vice versa.

However, for multi-colour screens, the line can be omitted entirely, since the correct value of 'status' will be read in from the converted Line 1210.

1430 - Repeat this process until the file is empty.

1460 - Close the sequential file.

2000 - This subroutine draws a line from (*xstart*, *ystart*) to (*xend*, *yend*), in a colour which is dependent on 'status'. It is necessary for the user to code this subroutine suitably for the chosen system, but the main workings should be clear. First of all, the colour of the line is determined and set from 'status' (Lines 2000-2010). Finally, the line is drawn using the co-ordinates supplied.

A knock-out

A while ago we had a plea for a cheat routine for Elite's *Airwolf*, a game that I and many others find so difficult that it is barely loadable. Steve Palmer of Denham has come to the rescue of Spectrum owners with this routine he worked out. First type this:

10 Border 0; Paper 0: Load: Clear 23999: Randomise Usr 23296. Save it to tape with Save "AW" Line 10 then New. Then enter this:

10 For A = 23296 TO 23346: Read Z: Poke A,Z: Next A

20 Data 6, 4, 197, 205, 86, 5, 193, 16, 249, 221, 33, 0, 64, 17, 0, 27, 62, 255, 55, 205, 86, 5, 221, 33, 192, 93, 17, 63, 162, 55, 62, 255, 205, 86, 5, 62, 200, 50, 73, 178, 62, 1, 50, 100, 169, 50, 150, 169, 195, 195, 230.

30 Save "AWC" Code 23296, 70.

Run this, start recorder again and press any key. Then type New. Load your two new programs and play your copy of *Airwolf* from the beginning - it should load and give you an easier game. As Steve says, "Two hundred lives and the walls cut down to size." He also has a tip for the *Dark Star* high score table - when you get the high score hold Caps Shift and Symbol Shift down and press the keys 1 to Enter in order to see a message from the programmers. He also says, "Select the change fame format and press six - can anyone see anything different about this? Finally can I thank Chris Green for his map of *Airwolf* which we will send in later." I'm looking forward to it Steve.

Neil O'Sullivan and Graham Kellaway of Enfield have sent these codes in to get to the different boxers in *Frank Bruno's Boxing*. For boxers 2 and 3 enter your name as WHO. For boxers 4-9 enter name as GAK. The winning ceremony is counted as box-

er number 9. 1 - just press enter; 2 - BGI0BQ6; 3 - MAMINCON6; 4 - N7CINIGNI; 5 - C1CINMEC8; 6 - A4JIOCC18; 7 - MBDIHAA8; 8 - IZHINO8L3; 9 - O3HII9BN5. Very close behind comes a letter from Alan Brown of Duns in Warwickshire who hasn't got through as many rounds but offers these tips - "To beat the Canadian Crusher use alternate high and low punches. For Andra Punchedov use a high punch with your left fist when he dodges to the left. For Frenchie - work up your K.O. power and keep punching when he falls down so that you knock him out as he gets up (is that in the Queensbury rules?). Can anyone beat my Canadian Crusher knock out time of 0.38.20?"

One of the stalwarts of the columns contributors, someone to whom we owe many of our very best cheat routines, is Paul Miller. Here is a selection of tips from the latest letters from Paul, and there will be lots more to come over the next few weeks. Where would we be without him?

System 15000 - some codes. L.T. Perry & Co, 493 5429, Infra or Vin 15; Satatel 222 2196, St. 421; Solicitors 930 7269, CCYRP 458; Big Apple Inc. 010121297658 58; Craig Comm. 837 1099; Elwood Bro 01012129766868, EBU 1657; BoonSecurities 343 1408, CD = TY4Y.

Starion - In sector 1 the first anagram is Bible and the date 1968. The second is EEC and 1987. The next is diamond and dates from 1897. The last is relativity and 1905. (Lets have a lot more solutions to this game - there are a lot of anagrams floating around in space and some of the answers are pretty obscure).

Alien Swarm - Poke 24266, number of lives.

Blue Thunder - Poke 41006, number of lives.

Dead Racer - Poke 27150,0

infinite lives.

Hall Of Things - Poke 32717,0 no wounds, Poke 35923, starting amount of magic.

Fantastic Voyage - 10 Clear 30791: Load "Voyage" Code: Poke 54492,0 (infinite divers): Poke 54227,0 (stops infection): Border 0: Randomise Usr 53248.

Black Hawk - Poke 34695,183 infinite lives.

Cavern Fighter - Poke 31683,0: poke 31684,0 infinite lives.

Pinball Wizard Poke 51566,0

Finally let's get BBC owners off the hook because here without any further ado is the completing part of Dave Noble's complete solution to *Castle Quest*.

"Climb the long ladder to the top. Jump left. Climb down to gold brick and get it. Climb up the ladder and travel left jumping the gaps to the point where the troll appears. He will take the brick and put in in the room with two ladders down to it. Go down the

and the water will kill her. If she just quivers and recovers she was not close enough!

Continue left to the wand and enter the location where the wand is, holding the stool. Pick up the wand and drop the stool and bucket. Stand on stool and jump up. Climb up ladder to left and up. Pick up gold coins in this passage. Restore the aqualung. Enter the water and go to the ladder used before. Drop the aqualung. Pick up the ruby and the sword. You should now be carrying Sword, Ruby, Gold Coin, Brick and Wand. Go up the ladders and travel left to the point before the troll where the wizard appeared. Go down this short ladder. You should see a passage entrance and a ladder past it to the left.

"Throw the item being half through it. Jump to left into passage and jump left to the top of the ladder. Restore the sword and pick up the item which was thrown.

Airwolf from Elite

ladder he doesn't use and get the brick back - move to the left and troll will reappear. Avoiding him go through the passage out of which the troll appears and cross the bridge. Continuing left returns you to the initial start position. Trap the monkeys as before and get them to go past both spiders. When past drop the torch and restore the bucket. Walk down the steps and jump left across the gaps to the point where the sound of the witch's approach begins. When the witch gets as close as possible throw the bucket at her

"Make sure you are holding the sword. Go down the ladder to the mezzanine just above the level on which the yellow guards are pacing. Along to the left is a short ladder. Go down this and scroll the screen to the left so you are on the right hand side. When only one guard is in sight step off to the left and kill him. Walk right and kill the second guard and drop the sword. Restore the wand. Continue walking right to the point where you should drop into the water and you have done it!"

PRINTER OFFERS

Look at these deals on Centronics Printers. All prices are inclusive of receipted delivery, VAT and lead (please specify Amstrad, BBC, CBM 64, Oric, Dragon, Einstein or Memotech) for Spectrum or QL users we can supply with a suitable interface for an additional £20.00.

SMITH CORONA FASTEXT 80

Another scoop purchase allows us to offer these high quality fully fledged 80 column, 80 cps dot matrix printers at a stunning price. These printers were intended to sell for around the £250 mark. Our offer allows you to buy a proper printer for less than the cost of many thermal printers. Friction speed is standard and an optional tractor unit is available.

£129.95

Price includes Centronics lead to suit your micro.
Or to suit Spectrum with Kempston "E" interface £149.95

TATUNG TP100

Bulk purchase allows us to offer this highly popular, high specification printer at an unheard of price. It is from the same manufacturer and of very similar specification to the Mannesman Tally MT80+ and Shinwa CP80. This style of printer reputed to be the most popular in its class boasts many superb features. It uses square pins which avoids that "dotty" look and gives a nicely formed up "near letter quality" print at 100cps. Friction and tractor feed are standard. It has full graphics ability. Take a look at these unretouched, actual size print samples.

Standard PICA text (100cps)

PICA text emphasised

True descenders on jpg etc.

ELITE mode gives 96 columns

CONDENSED mode gives 142 columns

ENLARGED mode

SUBSCRIPTS and SUPERSUBSCRIPTS

underlines nicely

Italics available in all modes

We are convinced that this printer offers the best performance and value in its class and at our unheard of price is a BARGAIN.

ONLY £189.95

Price includes Centronics lead to suit your micro.
Or to suit Spectrum with Kempston "E" interface £209.95.

MICRO P MP165

This printer is a very high specification at an unbelievable price. It boasts 165 cps in draft mode and 70 cps in near letter quality mode, which is switch or software selectable. It is friction and tractor feed as standard has a 2K buffer and is EPSON compatible (it even uses an EPSON ribbon). It can print in standard PICA 80 column mode or a variety of others from enlarged 40 column mode to condensed at 132 column. Italics are available in all modes. Normally this printer would be expected to sell at £300 plus we are offering it at our ultra keen price inclusive of printer lead to suit BBC, Amstrad, CBM 64, Oric, Dragon, Einstein or Memotech.

ONLY £249.00

Price includes Centronics lead to suit your micro.
Or to suit Spectrum with Kempston "E" interface £269.00

Tony Bridge's Adventure Corner

Market forces

Young Carruthers enjoyed being a Troll. Of course his talons felt awkward in his Doctor Martens, but looking in the mirror, he felt that his bristly snout, twitching as it was above two terrible tusks, was quite fetching. . .

Well, a good adventure evokes a certain amount of atmosphere, but this may be taking things a little too far! The last two or three years have seen an incredible increase in the popularity of adventures, and this surely comes as no surprise to the observer of the computer software scene.

Our hero, young Carruthers, is actually a bit of a maverick - most adventurers would rather dream of being the all-conquering hero.

The first adventurers, running massive mainframes were set in underground complexes and the player explored vast subterranean landscapes in search of treasure and molto scores. Striding forth, lantern held high in one hand, sword ready in the other, players could indulge all their fantasies of dragon-slaying and treasure-seeking - but now with the added fillip of lots of lateral thinking and logical puzzling in order to solve the many problems.

It was thus entirely evident that once home computers gained enough memory, then as surely as *Cave* followed *Colossal*, adventures would become a major pastime (though speaking of memory, I once saw a perfectly playable adventure on the ZX81!).

From the early days of text-only, we have seen adventures like arcades, grow ever more sophisticated as programmers pushed against the boundaries of their machine's capabilities - how often have you seen the phrase "what more can be done with the ZX81/Spectrum/BBC?", or even more hopefully, "You'll never see a better program on the . . ." Famous last words indeed!

During the last year of so, two major trends in adventure software have become evident. The first is the graphic adventure.

America does not seem to have been hit by the graphic revolution as we have here in Europe - there, just about all software is disc-based and adventures rely heavily on disc access to call up

details of each location. Apart from leaving every available byte free for the framework of the program, thus allowing very flexible play, this random access allows much detailed location descriptions and more sophisticated character inter-reaction than can be hoped for with the serial access of tape.

Bowing to 'market forces', British adventure houses now find it mandatory to include graphics in their programs - so much so that the phrase 'text-only' is now often taken to mean 'text-plus-graphics', with 'graphic adventures' denoting that other booming creature, the arcade adventure, of which more later.

In The Corner, I've tried to remain aloof from the 'text v graphic' debate, which has raged since *The Hobbit* made its first appearance. Although The Corner seems to have gained a reputation of being one of the last bastions of pure text adventures, this is not to say that I don't enjoy graphic adventures. But it is sometimes with regret that I look at modern trends.

Even given the memory-saving compaction routines of authors like Level 9, and the fact that in good adventures you should be able to turn off the pictures, nevertheless, there must surely amongst all those bytes given over to coloured pixels, lurk an abundance of locations and problems that will never now be seen. Is it my imagination, or do the latest Level 9s, as just one example, lack just a

this has been the cause of the upsurge in popularity of adventures, or the effect of it, I'm not sure, though I am sure that, as adventures have gained in popularity, so pure arcade shoot 'em ups have declined. Every computer gamer loves the vicarious thrill of a good zap, but now that arcade games seem to have reached a level of sophistication that makes it difficult to see what else can now be achieved with the present generation of machines, adventures offer a far more open environment - the player's own imagination.

Arcade games have recently adopted the trappings of adventures, and there is now a third category of computer game: the arcade adventure. I have occasionally mentioned these in The Corner, and recently covered *That's The Spirit* in detail. Arcade adventures are, I'm sure, a valid though rather distant relation of the logic-puzzle adventure.

The second major trend of recent adventuring has been the do-it-yourself adventure. The software scene is, or was, before the big money moved in, much more of a cottage industry on this side of the Atlantic, and although most of the small companies who worked from a bedroom just three or four years ago are now large corporate bodies, there are still many individuals writing adventures.

Although there has always been a trickle of adventures coming from the

You are standing at the end of the road before a small brick building. Around you is a forest. A small stream flows out of the building and disappears down a valley.

You see:
Nothing much.

What now ?

You are in a valley in the forest, beside a stream tumbling along a rocky bed.

You see:
Nothing much.

What now ?

Colossal Cave

little of the old atmosphere? In this particular case, the adventures are still of the highest quality, but it is true to say that others use graphics in their adventures to hide the true awful nature of the game.

Still, there's no denying that graphics can look very pretty and serve to frame the adventure in a nice wrapping. Occasionally too, the picture holds some clue not evident from the text, and this is all part of solving the puzzle.

So, adventures with added graphics have been, in my view, one of the major trends of the past year or so. Whether

one-man software house, the trickle became a torrent with the release of *The Quill*, the tabula rasa adventure utility. I feel this is one of the most important programs yet released for the home computer user.

Although accomplished programmers tell us otherwise, for us would-be adventure-writers, mere mortals as we are, the coding of an adventure is the most difficult part of the process and most of us are discouraged from writing them even though we have in our minds a superb scenario. *The Quill* takes care of the machine-code, leaving us to construct

Tony Bridge's Adventure Corner

the storyline – and this is where the a.p. (see above) is finally vindicated, because that story really is the hardest part of writing an adventure. We've seen some truly awful *Quill'd* programs, many competent ones, but only a small handful that could stand beside the truly great adventures. As much if not more care has to be taken with the presentation of the *Quill'd* adventure. The *Quill* in its standard form has many drawbacks, and it so to Gilsoft's credit that the company has a policy of continually updating the utility.

The utility has encouraged a whole army of 'front-room' adventure-writers, and this can only be a good counterweight to the serried ranks of dandified, glossily-advertised big name software houses, many of whom have the laughably reactionary policy of refusing to assess *Quill'd* adventures!

Adventuring has become a hobby in its own right, and nowhere is this more clearly seen than in the rapid increase of the number of clubs and newsletters over the past year. Unfortunately, many people had cause to regret their first exposure to an adventure club, receiving only silence for their fiver sent off in good faith. But worthy enterprises like Henry Miller's Adventurer's Club Ltd., Nick Walkland's *Orcsbane* fanzine/helpline and the joint effort from Roger Garrett and The Adventurer's Guild,

Adventureline, have brought pleasure to many adventurers and are now well-established. These clubs and others have been the subject of a recent Corner, and will be updated soon. Suffice to say that in the absence of the late much-lamented *Microadventure*, the newsletters from these clubs are everything the adventurer needs when resting from the latest adventure.

More evidence of adventures as a hobby, if required, can be seen in the number of Helplines and Adventure columns in computer magazines. Helplines fulfill more than just a need for help when stuck – they also introduce adventurers to each other.

The most pleasant part of my job over the last three or so years has been reading letters from all over the world, from Canada to Australia to Portugal and Malta and Poland – most of course, require help, but other correspondents are happy just to chat about our hobby.

Future trends? Despite what distributors would have us believe, pure text adventures will always be with us, and as memory becomes cheaper, so will adventures grow and become more interesting, particularly as disc hardware becomes more common in this country.

But graphic adventures too are here to stay, and the opportunities to involve the player more closely with the plot will increase as does memory. The use of

icons to make a speedy computer/player interface is now established and will become more sophisticated.

Getting into pure graphics, I feel that the arcade adventure will remain just a distant cousin of the text (with graphics) adventure.

But there is no reason why an adventure should not be conducted entirely in graphics – the early 3D maze games are an indication of the way that this particular trend could go. Novagen's *Mercurian* allows the player to descend from his spaceship (after zapping the general locality of aliens) and 'walking' around the subterranean complex doing all the usual lamp-getting and treasure-seeking. The zapping part of the game is sensational, but the version I saw some time ago was a little short in the adventure department. With more Ram to play with, this kind of adventure could become a major trend.

Finally, don't forget the Troils! They will always be with us, and rather than betraying a paucity of imagination on the part of the writer, those fantasy worlds of Dragons, Elves and magic swords are simply frameworks for worlds in which anything can happen. As long as the best adventure-writers can continue to suspend our disbelief for a few hours whilst we explore their worlds, then adventures will remain a challenging and important branch of computer software.

THE WORM IN PARADISE

The worm will turn up next week

£9.95 on AMSTRAD, ATARI, BBC, MSX, SPECTRUM etc.

Popular cassette labels

Popular Computing Weekly Micro Magic

The Amstrad CPC6128

We are giving away an Amstrad CPC6128 128K micro – worth £399 – every seven days until Christmas. Not only that, but every Micro Magic card is a winner – every card wins a runner-up prize of free Special *Popular Computing Weekly* cassette labels

How to find out if you win this week

To find out if you are a prize winner this week this is what you must do:

- 1) Key in the computer program listing printed here into your micro and Run the program.
- 2) Input your special **Micro Magic** number as data in the program when requested and press **Enter**.
- 3) The program will tell you if you have won a prize this week and what it is.
- 4) If you have won a prize you can claim it by filling in the coupon on the back of your special **Micro Magic** card. Then send

```

10 PRINT "Input your personal Micro
    Magic number"
20 INPUT X
30 IF X=1 TO 1
40 LET Y=2 * (X+27)
50 LET Z=X * 27
60 LET W=2 * Z + 1000
70 NEXT X
80 IF Y=95640 THEN GOTO 70
90 IF Y=1120664 THEN GOTO 80
100 PRINT "Your matching Micro Magi
    c number is"Y
110 PRINT "Better luck next week!"
120 STOP
130 PRINT "Your matching Micro Magi
    c number is"Y
140 PRINT "You have won an Amstrad
    CPC6128"
150 GOTO 70
160 PRINT "Your matching Micro Magi
    c number is"Y
170 PRINT "You have won cassette la
    bels"
180 GOTO 80
    
```

Micro Magic: Week 3 Program listing

This week's winning Micro Magic Numbers: 195640 and 1120664

If you think you've won complete the form on the back of your **Micro Magic** card and send it to: **Micro Magic, Popular Computing Weekly, 12-13 Little Newport Street, London WC2H 7PP.**

the completed card off to: **Micro Magic, Popular Computing Weekly, 12-13 Little Newport Street, London WC2H 7PP.**

Don't forget to fill in both your name and address, and also both your winning **Micro Magic** answer from this week and your special **Micro Magic** number.

5) If you haven't won this week, don't give up hope. Keep your **Micro Magic** card and use it to find out if you win with next week's **Micro Magic** computer program. The same card will last you right through to Christmas, so don't throw it away – you could miss the opportunity to win.

Micro Magic cards can only be obtained in line with the criteria outlined by Scot Press. Participants are entitled to only one card each. Cards and accompanying documentation can be obtained free of charge by writing to Scot Press, 12-13 Little Newport Street, London WC2H 7PP.

Dudley's Deals super little savers!

**NOW NOBODY HAS AN
EXCUSE NOT TO BUY
FROM ME... EVEN IF YOU
DON'T HAVE A COMPUTER I'LL
SELL YOU ONE (see below) OK!
HERE'S THE DEAL...**

Microstick	Dudley's Price	£13.95	RRP £16.95
Quickshot II	Dudley's Price	£ 6.95	RRP £ 9.95
RAM Turbo Interface	Dudley's Price	£15.5	RRP £22.95
RAM Single Port Interface	Dudley's Price	£ 6.50	RRP £ 9.95
DK-Tronics Single Port Interface	Dudley's Price	£ 7.50	RRP £ 9.95
DK-Tronics Dual Port Interface	Dudley's Price	£10.00	RRP £13.00
DK-Tronics Programmable Interface	Dudley's Price	£18.18	RRP £22.95

Buy any joystick with any interface and I'll knock £1.00 off the deal. Downstairs in my basement I've got some amazing bargains... For BBC & Spectrum owners a data recorder with mains for only £19.95 (RRP £27.95). If you want more rabbit than Watership Down on your computer buy this **Currah Speech Unit (Spectrum/CBM64)** Dudley's price £17.17 (RRP £29.95) or the complete **Currah micro pack (Spectrum only)** for only £20.00 (RRP £35.00). Amstrad owners – you're not left out... rabbit in stereo with the **DK-Tronics Stereo Speech** for only £25.00 (RRP £29.95) and for those with a creative touch **DK-Tronics Light Pen (Amstrad/Spectrum)** only £17.00 (RRP £19.95). And for those who always seem to be losing their keys the bedroom's still full of **Key Tracers** at £6.95!

Someone's nicked all my Spectrums so buy my **Sinclair Six Packs** from me at a super saver price of £9.00.

Finally for the brainy ones among you the **Ferranti Advance 86B** (fully IBM compatible) for only £500 inc delivery.

Don't forget when you order tell me what product you want, your name and address plus what computer you use! Come and meet me and the boys at the Commodore Show on the 26 and 27 October at Tech West Centre, Warple Way, Shepherds Bush, London W12.

Please make cheques/PO's payable to **Dudley Langmead Enterprises Ltd** and send to **Dudley Langmead Enterprises Ltd, 93 Bedford Road, Hitchin, Herts. (Tel: 0462-21225)**

Peek & Poke

Spectrum tips

M Payne of Coventry, writes:

Q You mentioned on your page some time ago that you would like readers to send in tips for their micros. Well here are some tips for the Spectrum.

1. To find out the contents of a cassette tape; use **VERIFY "XXX"**

2. To activate auto-scroll; use **POKE 23692,0**

3. To test your Rom, unplug all peripherals (except the TV) then use this:

10 Let C = 0: For B = 0 TO 16383: Let C = C + Peek B: Next B: Print C

If the Rom is OK then the answer 1926175 should be printed.

How's that?

A Not bad! The first one suffers from the obvious drawback that you have to read the whole tape at normal speed, but that's what you deserve if you forget what is on a tape!

The third one takes a little time to produce the correct answer (2 minutes 26 seconds to be precise), but should be quite useful in deciding whether there is a problem with the Rom. Keep those tips coming.

Heading to come

Gill Cooper, Rayleigh, Essex, writes:

Q I have a Spectrum and also the games *Combat Lynx* and *Fighter Pilot* (amongst others). I wonder

if you know of any company that sells keyboard overlays for such multiple key games (like the one supplied with *Lords of Midnight*)?

A Print 'N Plotter products certainly produce keyboard overlays for the Spectrum which can be customised to your needs. These can usually be obtained from most good computer shops.

The price is quite reasonable too.

It seems a pity that the suppliers of 'multi-key' games do not follow the example set by Beyond Software and supply the overlay with the software – the cost can hardly be prohibitive.

Shop around

Christos Giannikos, of Athens, Greece, writes:

Q I saw in Vol 4 No 5 that the cost of the QL microdrive cartridges has

come down from £4.95 to £1.99 each as from February 1.

However, a friend of mine was charged £4.95 for each cartridge at a London shop on March 1.

Just why did he have to pay the old price and who is setting the prices? I think Sinclair must be the one setting the highest price anyway.

A Basically each retailer is able to charge whatever price suits him or her best. Although Sinclair may have reduced its prices to the retailers, you should remember that they may still have large stocks that were obtained at the old prices.

This is simply another example of the old saying that it is essential when buying to shop around.

Most of the larger stores selling computer accessories will normally reduce their prices immediately after a manufacturer announces a price cut, but the smaller shops sometimes only follow somewhat later.

POOLS AID BY TAMASSY FOR THE COMMODORE 64

● CONSIDER THESE FACTS:

1. Teams are both promoted and relegated each season.
2. In 1871/72 Wanderers beat Royal Engineers 1-0.
3. The venue for the 1986 World Cup is the Aztec Stadium, Mexico City.

All very interesting, but they won't help you win the pools.

● POOLS AID is different — although fun and easy to use (with on-screen prompts and menu driven selection), it cuts through the jargon and concentrates on TODAY'S RESULTS.

● Using up-to-date statistics and the authors' experience, IT WILL GUIDE YOU TOWARDS CERTAIN VICTORY — The sky's your limit with POOLS AID

- So cut out the guesswork and do it the easy way with POOLS AID
- NOW THAT'S A FACT

£14.50 tape, £15.50 disk version. Cheques or POs to:
TAMASSY, 33 MATHER STREET, BLACKPOOL,

NEW TAPE TO DRIVE TRANSFER OF RECENT PROGRAMS

SPECTRUM owners can even transfer many of the LATEST fast/jerky programs to their drives at LOW COST with our software and information sheets. No risk as our programs carry our MONEY BACK GUARANTEE (not applicable to tape).

Finally you will need our MD1b (for midrive) or WD1b (for Wafa or disc drive) programs. Includes the ability to chop/split bytes in one go, bytes move, 'VAL' creator and REMKILL. Make visible etc. FULL manual with example transfers. MD1b or WD1b cost on tape £6.99. "MD1b manages more programs" - Your Spectrum

To manage the latest programs you will also need our T7 program which INCLUDES the ability to ALTER fast/jerky loaders to "normal".

*Features: Baud rate measurement, 'Jerky detector' T7 cost £6.50 on tape. On Midrive cartridge £9.99 (incl MT6, an extra Midrive utility).

NEW TERM INFORMATION SHEETS

Each sheet gives you the DETAILED instructions (using our software) required to transfer to your drive 8 of the more POPULAR programs. They cost £2 EACH plus SAE. Up to sheet 4 available.

SPECIAL OFFER - TRANSFER PACK. Buy MD1b + T7 on Midrive cartridge + INFORMATION SHEETS 1-3 for £15.50 (other drive owners get WD1b + T7 on tape + sheets for same price).

UPDATE SERVICE: Send old tape + large SAE to get a £2 REDUCTION. OVERSEAS: add £1 Europe, £2 others for each product. SAE for enquiries. PL460

TERM, DEPT PCW, 10 BRUNSWICK Gdns, CORBY, NORTHANTS NN18 9ER

SPECTRUM Sector Saver enables repair, modification and re-saving of microdrive programs and files. Interface 1 ser/nos after 87315. £4.95 cartridge M. Reed, 25 Richmond Road, Cardiff, CF2 3AQ.

INTERFACE 007

The Ultimate device to transfer Tape to Microdrive

ANY program, even Hyper Loads or Headerless can be transferred. Simply plug INTERFACE 007 into back connector of your Spectrum. Load in your program as normal, play it first if you want. At any time press button on INTERFACE 007 and your program will freeze. Press a key on keyboard and a special TAPE of your program will be saved out. This isn't just a full memory dump, but is ONLY as long as the actual Data in the memory. Reload this tape by MERGE Enter GO TO 2 then obey the screen. Starting/Stopping tape as it directs. Cartridges made Loads INDEPENDENTLY of Interface 007. An INTERFACE 007 will be available shortly for the Wafadrive and an extra program can be supplied to enable Interface 007 to be used for Disc transfer... send for free details if a Disc owner.

INTERFACE 007... £29.95 (plus £1.50 Reg postage)
Overseas postage: Europe + £2 Elsewhere + £4

HELPLINE

Fourth Protocol on Spectrum. Answers to Plumb's question: Where did it happen, and how was traitor recruited? Christina Bishop, 111 Salisbury Road, Wavertree, Liverpool L15.

Espionage Island on Spectrum. How do I use the plastic explosive and how do I get past the tank. Lisa Crouch, 50 Hulley Road, Macclesfield, Cheshire SK10 2LL.

Castle of Terror on C64. I'm in the castle, but I can't kill the knight or get behind the bookcase or anything. Help! Jim Stranger, 35 Cunnor Road, Sutton, Surrey SM2 8DW.

Mindbender on Spectrum. I can get the password. What next? David McCall, 20 Manse Crescent, Stanley, Perth, Scotland.

Red Moon on Spectrum. How do I get past red line. How do I increase power of incantations. How do I move around flood areas? Paul Brock, Flat 3, 97a Southwark St, London SE1.

Emerald Isle on Amstrad. What next after the canoe? Andrew Walton, Finlow Hill, Cottage, Over Alderley, Macclesfield, Cheshire.

Mountains of Ket on Spectrum. What do I do after entering the mountain? David McCall, 20 Manse Crescent, Stanley, Perth.

Quest on Vic20. Any help at all. Vilmore Rochester, 18 Lavanor Rd, London SE15.

Fantasia Diamond on Amstrad. How do I get across the river and how can I open the black window? Colin Newmarch, 166 Nelson Rd, Whitton, Middx.

Return to Eden on BBC. Can't get past snowballs, engines keep getting fried. Simon Lawrence, 9 Paynes Down Rd, Thatcham, Newbury RG13 4RT.

Castle Quest on BBC B. I don't know what to do with the wand after I have killed the witch. Matthew Roberts, 2 Sumburgh Rd, London SW12.

Twin Kingdom Valley on Electron. I can't get out of the underground maze. I keep going to the hall of the mountain king. Michael Nodding, 52 Auckland Terrace, Shildon, Co. Durham DL4 1AT.

Tir Na Nog on Commodore 64. I need help with everything. Philip Hames, 4 Warfield Crescent, Saltash, Cornwall.

Upper Guntree on Commodore 64. Keep dying from cut hand, what command do I use to get bandage? Stephen Lynch, 147 Bell Lane, Hendon, London NW4.

Dragoncore on Spectrum. I can't get to Camulod, the Druids Sanctuary and open the door in the Cursed Crypt. I have 1 crown. Peter Martin, 16 Mich. Karalos St, Stroncolos, Nicosia, Cyprus.

Colossal Adventure on Spectrum. How to find Pirates Chest and deal with him. S F Lovell, 16 Skimpans Close, North Myrnans, Hatfield, AL9 7PB. Tel: Hatfield 3309.

Land of Illusion on Atmos 48K. How do I open the door to the Barthog's Castle? How do I cross the pit? Michael Nesbit, Alexandria Court, Cornwall TR7 2QF.

WARGAMERS SERIES

The PSS Wargamers Series has been created to combine elements of a strategy game like chess with the added excitement of graphic arcade sequences. The games require skill and mental agility and are designed for the person who wants a serious but stimulating game. The strategic level of the game is played on a map system, whilst the tactical elements of the game can if wanted be played in an arcade style.

COMMODORE AND AMSTRAD

BATTLE of BRITAIN

THE SCENARIO

The Battle of Britain took place between July and October of 1940, and was the German Luftwaffe's attempt to defeat the R.A.F. and gain air superiority prior to Operation Sealion - the invasion of Great Britain scheduled for the summer of that year.

The ensuing battle has gone down in history as one of the most courageous of WWII culminating in the defeat

of the Luftwaffe and the cancellation of Operation Sealion.

In the famous words of Winston Churchill:

"Never has so much been owed by so many to so few"

The Game

You are in control of Fighter Command and the computer simulates

the operations room. Your task is to deploy your aircraft against the incoming squadrons of the Luftwaffe, whilst bearing in mind the problems of limited flying time, ammunition, available landing strips

and the size of the incoming force. You can also test your arcade skills by actually flying a Spitfire in air to air combat or firing an anti aircraft gun in ground to air battles.

Designed by Alan Steel
Written by Alan Steel, Ian Bird
Graphic Help from Paul Hutchinson

Battle of Britain will soon be available for Atari & Spectrum.

FEATURES

1. OPTIONAL ARCADE SEQUENCES
2. 3 LEVEL GAME OPTION
3. CAMPAIGN GAME OPTION
4. FULLY DETAILED INSTRUCTION BOOKLET
5. FREE MEMBERSHIP OF THE PSS WARGAMERS SOCIETY

BATTLE FOR MIDWAY

'Battle For Midway' puts you in command of the US Pacific fleets six months after the attack by the Japanese on Pearl Harbour.

WARGAMERS SERIES

BATTLE FOR MIDWAY

Computer & Video Games
- Commended by its readers for Best Strategy Game at the Golden Joystick Awards 1985

THEATRE EUROPE

ZZAPI 64 June '85
Gold Medal Award
"...the atmosphere generated by this excellent game is incredible...virtually unrivalled by anything else available on the 64..."

THEATRE EUROPE - THE GAME

Theatre Europe simulates the first 30 days of the war. In addition to being able to command either side, the player is able to choose the style of his opponent (The Computer).

Winning phrase No 46: "Eastenders soap, fishy plot, were you right?" from Hazel Williams of Sevenoaks. Honourable mentions to A. Cunningham for "Massed people of Tottenham rise up - why?" and T Burdis for "Alf Garnett - Speight's memory of home."

Now voting on week 48 - £25 to win

Each week *Popular* is compiling its own special software top ten chart - compiled by YOU.

And each week we will send £25 to the person who sends in, with their chart votes, the most original (witty, neat or clever - but never rude) phrase or sentence made up from the letters (you don't have to use them all) in the titles of the top three programs in this week's Readers' Chart, published above.

You can still vote in the chart without making up a slogan - but you won't be in with a chance of winning the prize.

All you have to do is fill in the form below (or copy it out if you don't want to damage your magazine) and send it off to: Top 10, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP.

Voting for Week 48 closes at 2pm on Wednesday October 23 1985. Entries received after that time will not be eligible for inclusion in that week's voting. The judges decision is final. Only one entry per individual per week will be allowed.

Name	My top 3: Voting Week 48

New Releases

VIOLENT

Imagine *Way of Exploding Fist* played not against a bunch of skilled but civilised monks close to Zen enlightenment, but a motley selection of thuggish, mythical creatures. These include a particularly vicious man/dragon entity that strikes below the belt and punches with its wings.

Plot is: rescue the princess by seeing off assorted badies and figure out what to do with the odd magic potions that litter your path. The fighting is the thing, though.

Fight controls are reduced to retreat / forward / jump / duck / high / middle and low blows. You come equipped with what looks like an enormous stick, but is apparently a sword. Either way there is much smashing of heads and bodies.

The graphic detail and animation is excellent, I particularly liked the way the nasties continue to swing and swipe with their swords even after they have left you dead on the ground - as though taking out their aggression on thin air.

Watch out for the bloke with the wings ... he's, well, hard.

In fact, *Fighting Warrior* may be the most violent computer game I've ever seen. Spectrum sound is used well to give the effect of really hard blows and there is none of *Exploding Fist's* meditative music and post-combat bowing. It should do well, Not as subtle as *Fist*, but a welcome release, nevertheless, except for those of a nervous disposition.

PACKAGED

More bundles - definitely this season's thing.

This time it's Creative Sparks which has four old titles on one tape for £7.50.

These are two - one package for the Commodore 64, one for the Spectrum.

The Spectrum tape includes *Orc Attack*, *Stagecoach*, *Tower of Evil*, and *River Rescue*. Of these *Tower of Evil* is a multi-screen kill - everything, *Stagecoach* is a dodge things with ropey graphics, *River Rescue* is a conversion of a once classic Vic-20 game into a Spectrum equivalent and *Orc Attack* is another conversion from the Atari originally I think where you man castle battlements cutting to ribbons all who attempt to climb them.

Of the four programs I would rate *Orc Attack* and *River Rescue* as well worth a few plays and the others as

Pick of the week

BATTLEFIELD ATTACK

Mirrorsoft will shortly launch *Strike Force Harrier*, a detailed simulation of the famous bouncing aero-plane, which will eventually be issued on a number of machines (including, people have gasped, the Amiga). More mundanely, it is now available for the BBC and Electron.

Strike Force Harrier is one of those 'real' simulations where there are lots of keys to grapple with and a lot of flying techniques to master. Not that it's 'just' a simulator - there is a complete battlefield attack program with the overall objective of destroying an enemy HQ using both Harrier and other forces.

Most important of all though, there are things to blow to bits in the sky and on the ground which means that even if you aren't that concerned about the minutest replication of Harrier handling characteristics, you still have a good reason to buy the program.

It took, I must admit, several thousands of millions of

pounds worth of scrapped Harriers before anyone in the office managed to achieve take off but nevertheless it soon became clear that *Harrier* is going to be *Revs* in the skies, ie, the flight simulation for the BBC as *Revs* was the racing car simulation.

Graphically it is good, excellent even, with a rate of screen up-date much faster than Mirrorsoft's earlier *Spitfire 40*.

Provided you don't make the mistake of assuming that this is a quick to play, blast-away, but realise it's a complex simulation that will require quite a lot of studying of manuals on your part, you could find this one of the most engrossing games you'll ever play on the BBC. I'd kill for an Amiga version.

AVERAGE

QL arcade programs are moving slowly from absolutely dire to OK, but completely unexciting.

There are two ways of reviewing a new QL games title; as a game on its own or relative to other software for the machine.

On former criteria, *QL Hyperdrive* is a fairly average version of *Turbo* that compares with an average Commodore 64 version of the same game (with lousier sound of course). On the latter criteria, it is probably the best action game for the QL so far.

For those not familiar with *Turbo*, it is a road racing game. Your viewpoint on the action is from behind your and other people's cars. The

road disappears to a point in the middle of the screen giving an illusion of distance. Race your car around the circuit and try to pass all the other cars - don't crash and accumulate points.

It's quite fun to play and the graphics, although a little jerky at times, are quite large and detailed.

If you have a QL, then I suppose comparisons with other machines are largely irrelevant, so in that sense I'd say this program is well worth taking a look at.

SOUNDTRACK

The Magicians Ball is an adventure being issued on a number of micros including the Amstrad, Spectrum and Commodore 64. The main initial point of interest is the fact that *Tubular Bells* has been licensed to form a soundtrack to the game.

On the Commodore this music is quite nicely presented - I have doubts about what it'll be like on the Spectrum, though. The exact bit of the music you get depends on where you are in the adventure and, perhaps, how well you are doing.

In the end though it's the adventure that matters and here I'm a little doubtful. It has the usual plot idea: really nasty Magician who invades nice world of very attractive princesses and locks

up nicest princess of all so that she can be rescued. The format is text (a nicely designed 'runescript' typeface) and small graphic pictures of each location.

The first locations feature plenty of action; you'll find five locked doors and half a dozen other puzzles to solve without trying, as well as an enormous number of weird objects and dubious looking people. It will understand sentences like *Throw coin through door* but I find it irritating that on being told *There is a small envelope*, *Take envelope* generates *I don't know the word envelope* whilst *Take small* generates *You have the small envelope*.

On balance, I think it'll probably turn out to be an above average adventure. The music does add something, but isn't really relevant (although the concept of music as soundtrack is an interesting one).

Buy it if you're an adventure lover. If you're uncommitted, it probably will not convert you though.

a time as possible.

You have a time limit of four game days and a variety of tools to assist you in your task. Water pumps put out fires in a small area but must be frequently replenished by taking them to the river. Demolition gangs can clear four to seven cells (areas of the city) and gunpowder gangs blast away cells that aren't burning to create a fire breach.

To use each defence, first of all you must find it/them in the city and move to the section of cells you wish to clear. The screen display is simple - London is made up of a series of standard designs for houses and walls, burning buildings are shown by the use of a flash. Though simple it works quite well and there is a facility included to design your own city.

Basically it's a kind of strategy game - what do you use where to the best advantage - but the real time and scrolling map give it a nice touch of extra tension. One of those occasional games where relative technical simplicity becomes irrelevant compared to the addictive and original virtues of the game.

Success at the ST

The success of the much discussed Atari ST would seem to depend on the amount of software that can be seen to be produced for it, and at the PCW show there were a good selection of programs to be seen in various states of completion. What the casual observer may not have realised is the problems that the various software houses have experienced in trying to program the ST.

Firstly, the 520ST is still not finished, contrary to the impression given in the adverts, no *GemWrite*, and no *GemPaint*. The latter are only just finished on the IBM, while very little has been seen at all of the Basic. The supplied operating system, still loaded from disc after every reset, is not in a very good state. The main problem is with the discs - they are incredibly slow.

The problem seems to be caused because some of the software is written by Atari, and some by Digital Research. Atari is doing the low level code, that is the routines that directly access the disc, keyboard and screen, while DR is doing the higher level routines, like *Load*, *Save*, and of course *Gem* itself. Atari claims its discs are just about the fastest around, but presumably because of the DR code that calls it, they work at very slow speeds. For example, opening a file for reading takes around three seconds, and closing it takes another three - it makes the QL microdrives seem suddenly fast.

The root of the problem is that while most of Atari's code is written directly in assembler, DR writes using the C language. While this is fine for more complex routines, basic operations like 'print a character' should always be written in assembler, but on the ST the basic routines are written in C, adding a large overhead to the simplest of operations. Using C also explains the size of the ST's Roms - the Mac Rom does much more, but being written

in assembler only takes 64K.

Another problem is bugs - in the current version, which is supposed to be the last version before being Rommed, creating files on disc is fraught with danger. If you *Create* a file that already exists, the old copy will not always be deleted, so you end up with two files with the same name. If you delete one of them, the machine usually crashes, so the obvious thing to do is delete the file before you *Create* it - well, this has no effect, as *Delete* doesn't always work as well. How such serious bugs can remain in software supposedly close to release I don't know. It is very difficult to debug your own software when the operating system on which it is running is still being debugged itself.

If you're programming using just *GemDos*, and not the Wimp environment of *Gem* itself, it's generally straightforward, and the documentation is acceptable. However, the idea of the ST is that all programs should use the graphic features of *Gem*, including windows, mice and so on, and that's when the fun really starts. The *Gem* manuals are written by DR, which is unfortunate. They describe how to call *Gem* from C, but make very little mention of machine language. In fact, the only references to machine-code all refer to the 8086/88 family used in the IBM and clones, which is not much use on the ST. To be fair there is one sentence which mentions the 68000, but it is completely inaccurate! In fact, there is not one sample program listing available written in 68000 assembler, which makes the struggle worse.

The documentation is massive, and can be separated into around ten A4 binders. Trying to find a particular piece of information can take a lot of searching, assuming of course that the information is actually there. For me, as a programmer, the most useful document is the source code listing of what will be the Rom, but this too is limited as certain sections are missing.

The ST hardware seems finished, and while containing nothing as revolutionary or technically complex as the Amiga, it does seem to work. The firmware is another story though, as DR seems to be in some difficulty doing the 68000 version of *Gem*, as well as the bundled software. Many companies want to do ST software, but their interest may soon wain if the machine is not finished properly and selling soon. It wouldn't take much for them to switch their interest and effort to machines like the Amiga and other anticipated cheap 68000 machines.

Andy Pennell

Dicey business

Puzzle No 179

Did you know that if two dice are thrown, you are more likely to throw a total of seven than any other total, and least likely to throw either a two or a twelve?

In fact, there are 36 different throws possible, of which six will result in a total of seven, and just one throw in each case will result in totals of two or 12. This will be familiar to players of Backgammon.

Suppose that instead of having two dice you throw four, and that instead of the total of all dice having to equal seven, a winning throw is one in which this total can be obtained by the combination of any two, three or all four dice. For example, a throw of a five and three ones would count since the five and two of the ones total seven. The fact that the fourth dice brings the total to eight doesn't matter.

Under these conditions, what are the odds of a winning throw?

Solution to Puzzle No 174

The numbers were 497 and two. Their product is 994 and their sum is 499. An infinite number of solutions can be found simply by inserting additional 'nines' into the middle of the larger number, eg, 4997 and 2, 49997 and two, and so on.

```
10 FOR X=100 TO 999
20 FOR Y=1 TO 9
30 LET P=X*Y
40 LET S=X+Y
50 P$=STR$(P)
60 S$=STR$(S)
70 IF LEN(P$)>LEN(S$) THEN GOTO 140
80 R$=""
90 FOR F=1 TO LEN(S$)
100 R$=MID$(S$,F,1)+R$
110 NEXT F
120 IF R$=P$ THEN PRINT X,Y
130 NEXT Y
140 NEXT X
```

In the program the two values *X* and *Y* are tested by means of two For/Next loop. For each pair of values the product and sums are found and are converted into strings *P\$* and *S\$*. The order of digits in *S\$* is then reversed into string *R\$*. If this string is then equal to *P\$* then a solution has been found.

Winner of Puzzle 174

The winner is Alison Matulko of Lymn, Cheshire, who received £10.

Rules

The closing date for Puzzle 179 is November 13.

The Hackers

This one could be our big break in the artificial intelligence market!

and the beauty is, it'll only need a few simple changes to your 'Master-Butcher' expert-system Ben. Here are the details.

Oh, and when you've finished, just take it round to the department of surgery at the medical school.

48K Spectrum

chronicles of the land of fairlight

1. a prelude: the light revealed

BY BO JANGEBORG

(author of 'The Artist')

"Maybe *the* game of the year!"

Your Spectrum, November 1985

"... one of the most sophisticated games the Spectrum has ever seen."

"... one of the ten best programs ever made for the Spectrum."

Popular Computing Weekly, October 1985.

"... the best arcade adventure of the year."

Your Spectrum, November 1985
